Critical Systems Thinking and the Management of Complexity Michael C. Jackson, 2019-04-08 From the winner of the INCOSE Pioneer Award 2022 The world has become increasingly networked and unpredictable Decision makers at all levels are required to manage the consequences of complexity every day They must deal with problems that arise unexpectedly generate uncertainty are characterised by interconnectivity and spread across traditional boundaries Simple solutions to complex problems are usually inadequate and risk exacerbating the original issues Leaders of international bodies such as the UN OECD UNESCO and WHO and of major business public sector charitable and professional organizations have all declared that systems thinking is an essential leadership skill for managing the complexity of the economic social and environmental issues that confront decision makers Systems thinking must be implemented more generally and on a wider scale to address these issues An evaluation of different systems methodologies suggests that they concentrate on different aspects of complexity To be in the best position to deal with complexity decision makers must understand the strengths and weaknesses of the various approaches and learn how to employ them in combination This is called critical systems thinking Making use of over 25 case studies the book offers an account of the development of systems thinking and of major efforts to apply the approach in real world interventions Further it encourages the widespread use of critical systems practice as a means of ensuring responsible leadership in a complex world The INCOSE Pioneer Award is presented to someone who by their achievements in the engineering of systems has contributed uniquely to major products or outcomes enhancing society or meeting its needs The criteria may apply to a single outstanding outcome or a lifetime of

significant achievements in effecting successful systems Comments on a previous version of the book Russ Ackoff the book is the best overview of the field I have seen JP van Gigch Jackson does a masterful job The book is lucid well written and eminently readable Professional Manager Journal of the Chartered Management Institute Provides an excellent guide and introduction to systems thinking for students of management Foundations of Informing Science: 1999-2008 T. Rolland, 2012-12-06 The market for information technology products is rapidly changing from a manufacturer driven market where new products were determined by the evolution of technology to a user driven market where users buy only products corresponding exactly to their needs and where competition is very strong Confronted with this market situation hardware and software producers are being obliged to adopt new strategies and to make a large number of products available on the market in response to a variety of different needs As a result of the multiplicity of choice available the design of an office system which corresponds precisely to user needs is becoming an increasingly complex task With exactly this in mind the Commission as early as 1985 invited submissions of projects aiming at the development of such adequate tools in its Call for Proposals for the ESPRIT Programme in order to assist companies in the design of their office systems This topic was

recognised as being of strategic importance considering the low level of penetration of Information Technology in European enterprises compared to the United States and Japan Following this strategy the project TODOS was selected and launched This project has successfully developed tools and methods for the definition of the functional specification of the office system as well as the system architecture and user interface results which can be of great interest for the IT community at large
