A Reference Catalogue and Atlas of Galactic Novae Hilmar W. Duerbeck, 1987 *A Reference Catalogue and Atlas of Galactic Novae* Hilmar W. Duerbeck, 2013-03-09 4 Census of the Catalogue The catalogue contains information on 277 objects 137 50% of them are stars whose outburst spectra or unambiguous minimum characteristics classify them as novae beyond doubt 123 of them could be identified at minimum 78 28 % are stars with amplitudes and light curve forms which makes nova classification likely 60 of them could be identified at minimum Thus 78 % of the objects in this catalogue are confirmed and suspected classical novae 16 6% have properties compatible with both novae and related objects 15 are identified at minimum Furthermore the catalogue and atlas contains data on 12 4 % dwarf novae of long cycle length or suspected dwarf novae for which only one outburst has been observed Examples are WZ Sge and CI Gern 6 2% recurrent novae or suspected recurrent novae are listed Examples are T CrB and AS Psc 6 2% X ray novae are listed Examples are V616 Mon and KY TrA 6 2% symbiotic stars and symbiotic novae are listed Examples are RT Ser and V352 Aql 11 4 % Mira stars or suspected Mira stars which at some time were believed to be novae are listed Examples are V607 Aql and V927 Sgr

Zech, 2013-11-11 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of the literature concerning all aspects of astronomy astrophysics and their border fields It is devoted to the recording summarizing and indexing of the relevant publications throughout the world Astronomy and Astrophysics Abstracts is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union Volume 43 records literature published in 1987 and received before August 15 1987 Some older documents which we received late and which are not surveyed in earlier volumes are included too We acknowledge with thanks contributions of our colleagues all over the world We also express our gratitude to all organizations observatories and publishers which provide us with complimentary copies of their publications Starting with Volume 33 all the recording correction and data processing work was done by means of computers The recording was done by our technical staff members Ms Helga Ballmann Ms Beate Gobel Ms Monika Kohl Ms Sylvia Matyssek Ms Doris Schmitz Braunstein Ms Utta Barbara Stegemann Mr Jochen Heidt and Mr Kristopher Polzine supported our task by careful proof reading It is a pleasure to thank them all for their encouragement Heidelberg October 1987 The Editors Contents Introduction 1 Concordance Relation PHYS AAA 3 Abbreviations 5 Periodicals Proceedings Books Activities 001 Periodicals 10 002 Bibliographical Publications Documentation Catalogues Data Bases 50 003 Books **Cataclysmic Cosmic Events and How to Observe Them** Martin Mobberley, 2009-03-01 In the Victorian era or for non British readers the mid to late nineteenth century amateur astronomy tended to center on Solar System objects The Moon and planets as well as bright comets were the key objects of interest The brighter variable stars were monitored but photography was in its infancy and digital imaging lay a century in the future Today at the start of the twenty first century amateurs are better equipped than any professionals of the mid twentieth century let alone the nineteenth An amateur equipped with a 30 cm telescope and a CCD camera can easily image objects below magnitude 20 and from very dark sites 22 or 23 Such limits would have been within the realm of the 100 and 200 inch reflectors on Mount Wilson and Mount Palomar in the 1950s but no other observatories However even those telescopes took hours to reach such limits and then the photographic plates had to be developed fixed and examined by eye In the modern era digital images can be obtained in minutes and analyzed on the fly while more images are being downloaded Developments can be e mailed to other interested amateurs in real time during an observing session so that when a cataclysmic event takes place amateurs worldwide know about it As recently as the 1980s even professional astronomers could only dream of such instantaneous communication and processing ability **Allen's Astrophysical Quantities** Arthur N. Cataclysmic Variables A. Bianchini, M. Della Valle, M. Orio, 2012-12-06 Cataclysmic Variables CVs are well furnished laboratories in which one can investigate a number of important physical processes These processes include thermonuclear reactions nebular physics winds mass accretion phenomena on compact objects magnetohydrodynamics plasmas thermal and non thermal radiative processes relativistic phenomena dust formation etc In the recent year the most exciting development in our opinion was that the small cold and invisible secondary components of CVs were found to be the prime motors for the evolution of close binary systems disclosing new scenarios for research All branches of astronomy and astrophysics often take advantage of the new ideas brought by the study of CVs It is for this reason we believe that meetings on CVs are important for most of the astronomical community The idea of a Congress on CVs in Padova has been fluttering in the air for a few years After all we thought a large part of the scientific heritage of Padova and Asiago Observatories is represented by the study of variable stars and in particular of CVs as Prof L Rosino reminded us at the very beginning of the Congress We finally chose Abano Terme as the site of the Conference not merely because Abano is one of the most famous centers in Europe for mud therapy and astronomers easily suffer from rheumatism but also because we knew that a very hearty welcome from the Abano Municipality and touristic associations awaited us

Compendium of Practical Astronomy Günter D. Roth, 2012-12-06 It is a pleasure to present this work which has been well received in German speaking countries through four editions to the English speaking reader We feel that this is a unique publication in that it contains valuable material that cannot easily if at all be found elsewhere We are grateful to the authors for reading through the English version of the text and for responding promptly for the most part to our queries Several authors have supplied us on their own initiative or at our suggestion with revised and updated manuscripts and with supplementary English references We have striven to achieve a translation of Handbuch for Sternfreunde which accurately presents the qualitative and quantitative scientific principles contained within each chapter while maintaining the flavor of the original German text Where appropriate we have inserted footnotes to clarify material which may have a different meaning and or application in English speaking countries from that in Germany When the first English edition of this work Astronomy A Handbook translated by the late A Beer appeared in 1975 it contained 21 chapters This new edition is over twice the length and contains 28 authored

chapters in three volumes At Springer's request we have devised a new title Compendium of Practical Astronomy to more accurately reflect the broad spectrum of topics and the vast body of information contained within these pages **Highly Evolved Close Binary Stars** Anatolii Mikhaïlovich Cherepashchuk, 1996 **Astrophysical Data** Kenneth R. Lang, 2012-12-06 This volume of Astrophysical Data deals with Planets and Stars a second volume Part II will give data for Galaxies and the Universe They both provide basic data for use by all scientists from the amateur astronomer to the professional astrophysicist In this first volume we not only provide physical parameters of planets stars and their environment but we also provide the celestial coordinates required to observe them Here we use cgs units for they are the most commonly used in astronomy and astrophysics but our volume begins with astronomical and physical constants and the conversion factors needed for other units The next section concerns the planets and their satellites it singles out the Earth and Moon for special treatment Spacecraft rendezvous with the planets and satellites have led to improved values for their atmospheric compositions orbital parameters magnetic fields masses radii rotation periods and surface pressures and temperatures This section also contains data for the asteroids comets and their debris We then discuss everyday stars beginning with the Sun and continuing with basic stellar data the brightest stars and nearby stars Special categories of stars such as the Wolf Rayet stars magnetic stars flare stars and RS CVn binary stars are included **Accretion-powered Compact Binaries** Christopher W. Mauche, 2003-12-04 This book is a well edited and comprehensive survey of the current research in the field of low mass accretion powered compact binaries that is binary stars containing a white dwarf neutron star or black hole as the primary star and a Roche lobe filling low mass as the secondary star These stars have reached a stage in their evolution where the transfer of mass from the giant phase onto a dwarf or sub dwarf star demonstrates many different aspects of physics The volume is essentially a complete analysis of these stars combining theory and observation and covering observations of low mass X ray binaries and both magnetic and nonmagnetic cataclysmic variables theories of stellar accretion novae and evolution of compact binaries **Literature 1987, Part 2** U.
