Supersizing Science Niki Vermeulen, 2010 In recent years there has been a clear rise in scientific collaboration as well as in studies on the subject While most scholars examine disciplines traditionally known to be collaborative such as physics and space research this book focuses on biology It investigates the growing collaboration in the life sciences or the emergence of what is called big biology While the Human Genome Project is often presented as the first large scale research project in biology cooperation in the life sciences has a longer history A comparison between centralised big physics and big biology reveals how the latter has a networked structure which evolved in interaction with the integration of information and communication technologies By concentrating on the construction of these networks three contemporary large scale research collaborations are analysed the Census of Marine Life that aims to make an inventory of life in the oceans the Silicon Cell initiative that wants to design a replica of a cell in a computer and the VIRGO consortium which investigates host virus interaction to develop a new therapy against influenza This book demonstrates how the process of making science bigger or the supersizing of science transforms the ways in which science is organised while it also changes the work of scientists involved As such this has both scholarly and professional implications for the next generation of scientists

Making Art Work W. Patrick Mccray,2020-10-20

The creative collaborations of engineers artists scientists and curators over the past fifty years Artwork as opposed to experiment Engineer versus artist We often see two different cultural realms separated by impervious walls But some fifty

years ago the borders between technology and art began to be breached In this book W Patrick McCray shows how in this era artists eagerly collaborated with engineers and scientists to explore new technologies and create visually and sonically compelling multimedia works This art emerged from corporate laboratories artists studios publishing houses art galleries and university campuses Many of the biggest stars of the art world Robert Rauschenberg Yvonne Rainer Andy Warhol Carolee Schneemann and John Cage participated but the technologists who contributed essential expertise and aesthetic input often went unrecognized Coming from diverse personal backgrounds this roster of engineers and scientists includes Frank J Malina the American rocket pioneer turned kinetic artist who launched the art science journal Leonardo and Swedish born engineer Billy Kliver who established the group Experiments in Art and Technology E A T At schools ranging from MIT to Caltech engineers engaged with such figures as artist Gyorgy Kepes and celebrity curator Maurice Tuchman Today we are in the midst of a new surge of corporate and academic promotion of projects and programs combining art technology and science Making Art Work reveals how artists and technologists have continually constructed new communities in which they exercise imagination display creative expertise and pursue commercial innovation Techno-Fixers Sean F.

Johnston,2020-03-26 This is the story of a seductive idea Over the past century the potential of new technology to solve social dilemmas has captivated modern culture From apps that encourage physical activity to airport scanners meant to prevent terrorism the concept that clever innovation can improve society is irresistible but faith in such technological fixes is seldom questioned Where did this idea come from what makes it so appealing and how does it endanger our future Techno Fixers traces the source of modern confidence in technology to engineering hubris radical utopian movements science fiction fanzines policy makers soundbites corporate marketing and optimistic consumer culture from the turn of the twentieth century until today Sean Johnston demonstrates that through the promotion of prominent government scientists technocrats entrepreneurs and popular media modern invention became the favourite tool for addressing human problems and society's ills Nonetheless when it comes to assessing the success of cigarette filters as the solution to safe smoking or DDT as the answer for agricultural productivity the evidence is sobering Cautioning that the rhetoric of technological fixes seldom matches reality Johnston examines how employing innovation to bypass traditional methods can foster as many problems as it solves A critical examination of modern faith in technology Techno Fixers evaluates past mistakes present implications and future opportunities for innovating societies
