Refractions A Way Of Seeing:

Refractions Richard C. C. Kim, 1987 **Expanding the Vision: Beyond Refraction. Life is a Story - story.one** Oktay Keyik, 2025-08-14

Expanding the Vision Beyond Refraction invites you on an unusual journey through the world of vision far beyond conventional specialist knowledge. This book is not a traditional textbook but a personal exploration full of intriguing questions, surprising observations, and honest experiences from the practice of optical science. Discover how the interplay between technology and human perception shapes the way we see why subjective impressions are just as important as objective measurements and how psychological factors can influence our perception. Learn about unique methods such as dark refraction or fogging which focus not only on numerical values but consider the entire experience of seeing. This book is for anyone who wants to truly understand their vision with openness, humor, and the courage to question accepted truths. An eye opener for those who not only wish to see more sharply but above all more clearly.

Concrete Utopianism Gary Wilder, 2022-08-09

Finalist 2022 Big Other Book Award for Nonfiction. Never before has it been more important for Left thinking to champion expansive visions for societal transformation. Yet influential currents of critical theory have lost sight of this political imperative. Provincial notions of places, periods, and subjects obstruct our capacity to invent new alignments and envision a world we wish to see. Political imagination is misread as optimism. Utopianism is conflated with idealism. Revolutionary traditions of non-liberal universalism and non-bourgeois humanism are rendered illegible. Negative critique becomes an end in itself. Pessimism is mistaken for radicalism and political fatalism risks winning the day. In this book, Gary Wilder insists that we place solidarity and temporality at the center of our political thinking. He develops a critique of Left realism, Left culturalism, and Left pessimism from the standpoint of heterodox Marxism and Black radicalism. These traditions offer precious resources to relate cultural singularity and translocal solidarity, political autonomy, and worldwide interdependence. They develop modes of immanent critique and forms of poetic knowledge to envision alternative futures that may already dwell within our world: traces of past ways of being, knowing, and relating that persist within an untimely present or charged residues of unrealized possibilities that were the focus of an earlier generation's dreams and struggles or opportunities for dialectical reversals embedded in the contradictory tendencies of the given order. Concrete Utopianism makes a bold case for embracing what Wilder calls a politics of the possible/impossible. Attentive to the non-identical character of places, periods, and subjects, insisting that axes of political alignment and contestation are neither self-evident nor unchanging, reworking Lenin's call to transform the imperial war into a civil war, he invites Left thinkers to see beyond inherited distinctions between here and there, now and then, us and them. Guided by the spirit of Marx's call for revolutionaries to draw their poetry from a future they cannot fathom yet must nevertheless invent, he calls for practices of anticipation that envision and enact call for and call forth seemingly impossible ways of being together. He elaborates a critical orientation that emphasizes the dialectical relations between aesthetics and politics, political imagination and

transformative practice concrete interventions and revolutionary restructuring past dreams and possible worlds means of struggle and its ultimate aims This orientation requires nonrealist epistemologies that do not mistake immediate appearances with the really real Such epistemologies would allow critics to recognize uncanny and untimely aspects of social life whether oppressive or potentially emancipatory They may help actors to render the world subversively uncanny and untimely They may clear pathways for the kind of critical internationalism and concrete utopianism that Left politics cannot afford to ignore

Nicole Oresme's De visione stellarum (On Seeing the Stars) Dan Burton,2006-11-01 In this critical edition and translation of Nicole Oresme's On Seeing the Stars the renowned 14th century natural philosopher proposes that the stars are not where they seem And perhaps nothing is where it seems In this earliest treatise on atmospheric refraction Oresme uses optics and infinitesimals to help solve this vexing problem of astronomy He is the first to propose that light travels along a curve through the atmosphere two centuries before Hooke and Newton who are credited with the discovery Further he calls all sense data into doubt Oresme's argument concerning the curvature of light is a major milestone in the history of science confirming that Oresme was one of the most innovative scientists of the pre modern world [Borish's Clinical Refraction - E-Book](#) William J.
