Knowledge of the history of architecture material characteristics instruments and techniques for investigations diagnosis and restoration are all vital aspects for the correct understanding of structural behaviour and the ability to make correct decisions for repair and strengthening techniques. Designed for use by all professionals involved or interested in the preservation of monuments the purpose of this book is to contribute to the development of new approaches in the area. Many of the examples examined including the Colosseum the

Tower of Pisa the Pyramid of Chephren the Tilla Kari Mosque in Samarkand the temples of Angkor and Konarak the Santa Maria Vieja Cathedral the domes of St Peter Hagia Sophia the Pantheon St Ignatio de Loyola and St Charles are the result of projects and studies carried out during Giorgio Croci s distinguished career The book features numerous black and white photographs and illustrations by the author *Mathematical Reviews* ,2007 **Building and Using Datasets on Armed Conflicts** Mayeul Kauffmann,2008 The so called hard or exact sciences with their necessary emphasis on technology and on the technical are hardly reputed for being very human and conversely the so called human sciences are often pronounced as soft because they cannot be based on the certainties associated with the former The search for truth which is the essential dimension of the construction of a peaceful world therefore has to navigate between considerations of a philosophical nature and the concrete data of the hard sciences If ever since the humanism of the Renaissance period we have been happy to lay claim to the wisdom of one of its great writers Rabelais who taught a moral lesson to the young Pantagruel with the neat formula science without conscience is the ruin of the soul we nonetheless stand in awe before modern scientific advances and the extraordinary achievements that they have opened up If everything is not permissible at least everything seems possible
