Mathematics and Computers in Archaeology J. E. Doran, F. R. Hodson, 1975 This book is for students and practitioners of archaeology It offers an introductory survey of all the applications of mathematical and statistical techniques to their work These applications are increasingly concerned with computerized data classification and

quantification and their effect is to reduce the level of uncertainty in the interpretation of the evidence that time and chance have left. Any archaeologist wanting to find out what these new methods have to offer has hitherto been forced to search for information in the specialist handbooks, conference proceedings and review articles of his own and very often of other disciplines. This book brings the information conveniently together so far as it pertains to archaeology and permits an assessment of its relevance and quality. Those who have been daunted by the specialist knowledge apparently demanded will now be able to acquire a thorough grasp of principles and practices. Only an elementary knowledge of mathematics is presumed throughout. Part 1 provides a brief introduction to basic concepts in archaeology and mathematics. Part 2 relates the standard archaeological techniques and procedures to mathematics; it concentrates on numerical approaches best suited to archaeological practices. Part 3 examines various automatic seriation techniques and discusses further work that is coming to play an essential part in the development of archaeology.

The Archaeological Survey Manual Gregory G White, Thomas F King, 2016-09-16. Governmental guidelines have forced a dramatic change in the practice of archaeological surveying in recent decades. In response to public and private development, surveying is needed to accurately inventory the cultural resources of a region and provide guidance for their preservation and management. Greg White and Tom King provide a handy introduction to students, field novices and land managers on the strategies, methods and logic of contemporary survey work. In addition to providing the legal and historical context for this endeavor, the book provides a heavily illustrated practical guide to conducting a survey to help beginners understand how it works in practice. This volume is perfect for an archaeological methods class, field school or reference collection.

Mathematics in Archaeology Orton, 1982-07. Archaeological Spatial Analysis Mark Gillings, Piraye Hacıgüzeller, Gary Lock, 2020-01-16. Effective spatial analysis is an essential element of archaeological research; this book is a unique guide to choosing the appropriate technique, applying it correctly and understanding its implications both theoretically and practically. Focusing upon the key techniques used in archaeological spatial analysis, this book provides the authoritative yet accessible methodological guide to the subject which has thus far been missing from the corpus. Each chapter tackles a specific technique or application area and follows a clear and coherent structure. First is a richly referenced introduction to the particular technique, followed by a detailed description of the methodology, then an archaeological case study to illustrate the application of the technique and conclusions that point to the implications and potential of the technique within archaeology. The book is designed to function as the main textbook for archaeological spatial analysis courses at undergraduate and post graduate level, while its user friendly structure makes it also suitable for self learning by archaeology students as well as researchers and professionals.
