Optical Processes in Semiconductors Jacques I. Pankove, 1975-01-01 Based on a series of lectures at Berkeley 1968 1969 this is the first book to deal comprehensively with all of the phenomena involving light in semiconductors The author has combined for the graduate student and researcher a great variety of source material journal research and many years of experimental research adding new insights published for the first time in this book Coverage includes energy states in semiconductors and their perturbation by external parameters absorption relationships between optical constants spectroscopy radiative transitions nonradiative recombination processes in pn junctions semiconductor lasers interactions involving coherent radiation photoelectric emission photovoltaic effects polarization effects photochemical effects effect of traps on luminescence and reflective modulation The author has presented the subject in a manner which couples readily to physical intuition He introduces new techniques and concepts including nonradiative recombination effects of doping on optical properties Franz Keldysh effect in absorption and emission reflectance modulation and many others Dr Pankove emphasizes the underlying principle that can be applied to the analysis and design of a wide variety of functional devices and systems Many valuable references illustrative problems and tables are also provided here

Semiconductor Devices and Integrated Electronics A. G. Milnes, 2012-12-06 For some time there has been a need for a semiconductor device book that carries diode and transistor theory beyond an introductory level and yet has space to touch on a wider range of semiconductor device principles and applications Such topics are covered in specialized monographs numbering many hundreds but the voluminous nature of this literature limits access for students This book is the outcome of attempts to develop a broad course on devices and integrated electronics for university students at about senior year level The educational prerequisites are an introductory course in semiconductor junction and transistor

concepts and a course on analog and digital circuits that has introduced the concepts of rectification amplification oscillators modulation and logic and Switching circuits The book should also be of value to professional engineers and physicists because of both the information included and the detailed guide to the literature given by the references The aim has been to bring some measure of order into the subject area examined and to provide a basic structure from which teachers may develop themes that are of most interest to students and themselves Semiconductor devices and integrated circuits are reviewed and fundamental factors that control power levels frequency speed size and cost are discussed The text also briefly mentions how devices are used and presents circuits and comments on representative applications Thus the book seeks a balance between the extremes of device physics and circuit design NBS Technical Note, 1970 Semiconducting II-VI, IV-VI, and V-VI Compounds N.Kh. N. Sirota,2012-12-06 The present four volumes published under the collective title of Chemical Bonds in Solids are the translation of the two Russian books Chemical Bonds in Crystals and Chemical Bonds in Semiconductors These contain the papers presented at the Conference on Chemical Bonds held in Minsk between May 28 and June 3 1967 together with a few other papers denoted by an asterisk which have been specially incorporated Earlier collections also published by the Nauka i Tekhnika Press of the Belorussian Academy of Sciences were entitled Chemical Bonds in Semiconductors and Solids 1965 and Chemical Bonds in Semiconductors and Thermodynamics 1966 and are available in English editions from Consultants Bureau New York published in 1967 and 1968 respectively The subject of chemical bonds in crystals including semiconductors has recently become highly topical and has attracted the interest of a wide circle of physicists chemists and engineers Until recently the most successful description of the properties of solids including semiconductors has been provided by the band theory which still dominates the physics of solids Nevertheless it is clear that the most universal approach is that based on the general theory of chemical bonds in crystals in which details of the electron distributions between atoms and of the wave functions appear quite explicitly

Insulating Films on Semiconductors M. Schulz,G. Pensl,2013-03-12 The INFOS 81 Conference on Insulating Films on Semiconductors was held at the University of Erlangen Nurnberg in Erlangen from 27 to 29 April 1981 This conference was a sequel to the first conference INFOS 79 held in Durham INFOS 81 attracted 170 participants from universities research institutes and industry Attendants were registered from 15 nations The biannual topical conference series will be continued by INFOS 83 to be held in Eindhoven The Netherlands in April 1983 The conference proceedings include all the invited Y and contrlDUtea 42 papers presented at the meeting The topics range from the basic physical understanding of the properties of insulating films and their interface to semiconductors to the discussion of stability and dielectric strength as well as growing and deposition techniques which are relevant for technical applications Strong emphasis was given to the semiconductor silicon and its native oxide however sessions on compound semiconductors and other insulating films also raised strong interest The proceedings survey the present state of our understanding of the system of insulating films on semiconductors As a new aspect of the topic the properties of semiconductors deposited and laser processed on insulating films was included for the first time VLSI Science and Technology/1984 Kenneth E.
