Healthy Urban Environments Cecily Maller, 2018-05-20 Set in the human environment

interaction space this book applies new theoretical and practical insights to understanding what makes healthy urban environments. It stems from recognition that the world is rapidly urbanising and the international concern with how to create healthy settings and liveable cities in the context of a rapidly changing planet. A key argument is that usual attempts to make healthy cities are limited by human centrism and bifurcated western thinking about cities health and nature. Drawing on the innovative more than human scholarship from a range of disciplines it presents a synthesis of the main contributions and how they can be used to rethink what healthy urban environments are and who they are for. In particular the book turns its attention to urban biodiversity and the many non human species that live in and share cities with humans. The book will be of interest to scholars and students in human geography health sociology environmental humanities public health health promotion planning and urban design as well as policymakers and professionals working in these fields.

The Global Commons Susan J. Buck, 2012-06-22 Vast areas of valuable resources unfettered by legal rights have for centuries been the central target of human exploitation and appropriation. The global commons: Antarctica, the high seas and deep seabed minerals, the atmosphere and space have remained exceptions only because access has been difficult or impossible and the technology for successful extraction has been lacking. Now technology has caught up with desire and management regimes are needed to guide human use of these important resource domains. In *The Global Commons* Susan Buck considers the history of human interactions with each of the global commons areas and provides a concise yet thorough account of the evolution of management regimes for each area. She explains historical underpinnings of international law, examines the stakeholders involved and discusses current policy and problems associated with it. Buck applies key analytical concepts drawn from institutional analysis and regime theory to examine how legal and political concerns have affected the evolution of management regimes for the global commons. She presents in depth case studies of each of the four regimes, outlining the historical evolution of the commons, development of interest in exploiting the resource domain, conflicts among nations over the use of the commons and efforts to design institutions to control access to the domains and to regulate their use, and concluding with a description of the management regime that eventually emerged from the informal and formal negotiations. *The Global Commons* provides a clear, useful introduction to the subject that will be of interest to general readers as well as to students in international relations and international environmental law and in environmental law and policy generally.
