Judd, 2010-09-30 Richard Judd and Christopher Beach define the environmental imagination as the attempt to secure a sense of freedom permanence and authenticity through communion with nature The desire for this connection is based on ideals about nature wilderness and the livable landscape that are personal variable and often contradictory Judd and Beach are interested in the public expression of these ideals in post World War II environmental politics Arguing that the best way to study the relationship between popular values and politics is through local and regional records they focus on Maine and Oregon states both rich in natural beauty and environmentalist traditions but distinct in their postwar economic growth Natural States reconstructs the environmental imagination from public commentary legislative records and other documents Judd and Beach trace important divisions within the environmental movement noting that they were balanced by a consistent civic minded vision of environmental goods shared by all They demonstrate how tensions from competing ideals sustained the movement contributed to its successes but also limited its achievements In the process they offer insight into the character of the broader environmental movement as it emerged from the interplay of local state and national politics The study ends in the 1970s when spectacular legislative achievements at the national level were masking a decline in mainstream civic

engagement in state politics The authors note the rise of the private ecotopia and the increasing complexity in the way Americans viewed their connections with the natural world Yet today despite wide variations in beliefs and lifestyles a majority of Americans still consider themselves to be environmentalists In Natural States environmental politics emerges less as a conflict between people who do and do not value nature and more as a debate about the way people define and then chose to live with nature In their attempt to place the passion for nature within a changing political and cultural context Judd and Beach shed light on the ways that ideals unify and divide the environmental movement and act as the source of its enduring popularity

Building Nature's Market Laura J. Miller, 2017-11-22 For the first 150 years of their existence natural foods were consumed primarily by body builders hippies religious sects and believers in nature cure And those consumers were dismissed by the medical establishment and food producers as kooks faddists and dangerous quacks In the 1980s broader support for natural foods took hold and the past fifteen years have seen an explosion everything from healthy eating superstores to mainstream institutions like hospitals schools and workplace cafeterias advertising their fresh from the garden ingredients Building Nature's Market shows how the meaning of natural foods was transformed as they changed from a culturally marginal religiously inspired set of ideas and practices valorizing asceticism to a bohemian lifestyle to a mainstream consumer choice Laura J Miller argues that the key to understanding this transformation is to recognize the leadership of the natural foods industry Rather than a simple tale of cooptation by market forces Miller contends the participation of business interests encouraged the natural foods movement to be guided by a radical skepticism of established cultural authority She challenges assumptions that private enterprise is always aligned with social elites instead arguing that profit minded entities can make common cause with and even lead citizens in advocating for broad based social and cultural change
