Northern North Atlantic A Changing Environment:

The Northern North Atlantic Priska Schäfer, Will Ritzrau, Michael Schlüter, Jörn Thiede, 2012-12-06 The northern North Atlantic is one of the regions most sensitive to past and present global changes This book integrates the results of an interdisciplinary project studying the properties of the Greenland Iceland Norwegian Seas and the processes of pelagic and benthic particle formation particle transport and deposition in the deep sea sediments Ice related and biogeochemical processes have been investigated to decipher the spatial and temporal variability of the production and fate of organic carbon in this region Isotopic stratigraphy microfossil assemblages and paleotemperatures are combined to reconstruct paleoceanographic conditions and to model past climatic changes in the Late Quaternary The Greenland Iceland Norwegian Seas can now be considered one of the best studied subbasins of the world's oceans

The Northern North Atlantic Priska Schäfer, 2001-04-02 The northern North Atlantic is one of the regions most sensitive to past and present global changes This book integrates the results of an interdisciplinary project studying the properties of the Greenland Iceland Norwegian Seas and the processes of pelagic and benthic particle formation particle transport and deposition in the deep sea sediments Ice related and biogeochemical processes have been investigated to decipher the spatial and temporal variability of the production and fate of organic carbon in this region Isotopic stratigraphy microfossil assemblages and paleotemperatures are combined to reconstruct paleoceanographic conditions and to model past climatic changes in the Late Quaternary The Greenland Iceland Norwegian Seas can now be considered one of the best studied subbasins of the world's oceans

The Oceans and Rapid Climate Change Dan Seidov, Bernd J. Haupt, Mark A. Maslin, 2001-01-09 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 126 Until a few decades ago scientists generally believed that significant large scale past global and regional climate changes occurred at a gradual pace within a time scale of many centuries or millennia A secondary assumption followed climate change was scarcely perceptible during a human lifetime Recent paleoclimatic studies however have proven otherwise that global climate can change extremely rapidly In fact there is good evidence that in the past at least regional mean annual temperatures changed by several degrees Celsius on a time scale of several centuries to several decades

Abrupt Climate Change Harunur Rashid, Leonid Polyak, Ellen Mosley-Thompson, 2013-05-02 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 193 **Abrupt Climate Change Mechanisms Patterns and Impacts** brings together a diverse group of paleoproxy records such as ice cores marine sediments terrestrial lakes and speleothems archives and coupled ocean atmosphere climate models to document recent advances in understanding the mechanisms of abrupt climate changes Since the discovery of the Dansgaard Oeschger events in Greenland ice cores and the subsequent discovery of their contemporary events in the marine sediments of the North Atlantic the search for these abrupt millennial scale events across the globe has intensified and as a result the number of paleoclimatic records chronicling such events has increased The volume highlights

include discussions of records of past climate variability meridional overturning circulation land ocean atmosphere interactions feedbacks in the climate system and global temperature anomalies Abrupt Climate Change will be of interest to students researchers academics and policy makers who are concerned about abrupt climate change and its potential impact on society

Influence of Climate Change on the Changing Arctic and Sub-Arctic Conditions Jacques Nihoul, 2009-01-25 The current warming trends in the Arctic may shove the Arctic system into a seasonally ice free state not seen for more than one million years The melting is accelerating and researchers were unable to identify natural processes that might slow the deicing of the Arctic Such substantial additional melting of Arctic and Antarctic glaciers and ice sheets would raise the sea level worldwide flooding the coastal areas where many of the world's population lives Studies led by scientists at the National Center for Atmospheric Research NCAR and the University of Arizona show that greenhouse gas increases over the next century could warm the Arctic by 3.5 °C in summertime Thus Arctic summers by 2100 may be as warm as they were nearly 130 000 years ago when sea levels eventually rose up to 6 m higher than today

Effects of Climate Change Across Ocean Regions Ove Hoegh-Guldberg, Elvira S. Poloczanska, 2018-07-05 The IPCC Fifth Assessment Report AR5 highlighted that conditions within Earth's ocean are changing more rapidly than any of the time during the past 65 million years and as a consequence major changes are occurring in natural and human systems While this major report has enhanced our understanding of the complexity of ocean issues we propose this research topic as an opportunity to expand discussion on past present and future changes across oceans regions

geophysics climatology and related disciplines Arctic Alpine Ecosystems and People in a Changing Environment Jon Børre Ørbaek, Roland Kallenborn, Ingunn Tombre, Else N. Hegseth, Stig Falk-Petersen, Alf H. Hoel, 2007-01-10 This book addresses the significant environmental changes experienced by high latitude and high altitude ecosystems at the beginning of the 21st century Increased temperatures and precipitation reduction in sea ice and glacier ice the increased levels of UV radiation and the long range transported contaminants in arctic and alpine regions are stress factors that challenge terrestrial and aquatic ecosystems The large natural variation in the physical parameters of these extreme environments is a key factor in structuring the biodiversity and biotic productivity and the effect of the new stress factors can be critical for the population structures and the interaction between species These changes may also have socio economic effects if the changes affect the bio production which form the basis for the marine and terrestrial food chains The book is uniquely multidisciplinary and provides examples of various aspects of contemporary environmental change in arctic and alpine regions The 21 chapters of the book are organised under the fields of Climate change and ecosystem response Long range transport of pollutants and ecological impacts and UV radiation and biological effects each also including aspects of the Socio economic effects of environmental change The introductory chapter presents and explains the internal connection and integration of all chapters The added value of these reviews and review like manuscripts from different disciplines hopefully yields new information about the integrated aspects of environmental change *Ocean Circulation and Climate* ,2001-03-27 The book represents all the knowledge we currently have on ocean circulation It presents an up to date summary of the state of the science relating to the role of the oceans in the physical climate system The book is structured to guide the reader through the wide range of World Ocean Circulation Experiment WOCE science in a consistent way Cross references between contributors have been added and the book has a comprehensive index and unified reference list The book is simple to read at the undergraduate level It was written by the best scientists in the world who have collaborated to carry out years of experiments to better understand ocean circulation **Marine Science Frontiers for Europe** Gerold Wefer, Frank Lamy, Fauzi Mantoura, 2012-12-06 Europe is a continent with a high coast to surface ratio and European seas encompass a broad range of settings and regimes The sustainable development of living and non living marine resources the protection of the marine environment and the provision of marine based services are critical to economic prosperity and to the quality of life of European citizens Addressing these concerns marine science researchers conducted a workshop reviewing major topics of European marine research This publication contains overview and thematic background papers as well as reports and recommendations for future research covering topics such as ocean climate coupling biogeochemistry coastal and shelf processes and ecosystem functioning biodiversity **Natural Climate Variability on Decade-to-Century Time Scales** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Climate Research Committee, 1996-08-30 This volume reflects the current state of scientific knowledge about

natural climate variability on decade to century time scales It covers a wide range of relevant subjects including the characteristics of the atmosphere and ocean environments as well as the methods used to describe and analyze them such as proxy data and numerical models They clearly demonstrate the range persistence and magnitude of climate variability as represented by many different indicators Not only do natural climate variations have important socioeconomic effects but they must be better understood before possible anthropogenic effects from greenhouse gas emissions for instance can be evaluated A topical essay introduces each of the disciplines represented providing the nonscientist with a perspective on the field and linking the papers to the larger issues in climate research In its conclusions section the book evaluates progress in the different areas and makes recommendations for the direction and conduct of future climate research This book while consisting of technical papers is also accessible to the interested layperson

Long-term Environmental Change in Arctic and Antarctic Lakes Reinhard Pienitz, Marianne S.V. Douglas, John P. Smol, 2007-11-08 Concerns about the effects of global climate change have focused attention on the vulnerability of circumpolar regions Long term historical data are needed to better understand the magnitude and direction of environmental change related to both natural and anthropogenic causes as well as to assess patterns of natural variability The paucity of instrumental data requires that proxy methods be used The abundance of lakes throughout the Arctic and Antarctic makes paleolimnological approaches especially powerful tools to assist interpretations of environmental change This book provides a synthesis of the broad spectrum of techniques available for generating long term environmental records from circumpolar lakes It also provides overviews of the geographic extent of paleolimnological work completed thus far in these regions It explores the diverse ways in which paleolimnology is used to address the pressing and emerging environmental issues of high latitude regions By providing both an introduction and in depth reviews this volume is of interest to students and advanced researchers alike who are studying earth atmospheric and environmental sciences

The Global Thermohaline Paleocirculation Elena Ivanova, 2009-10-03 Originally published in Russian in 2006 this is the first English translation of this important book on paleoceanography and paleoclimatology Its initial publication was followed by a surge of interest in this subject prompting the author to revise and translate her original work In the book she successfully summarizes her own research over recent years and compiles an overview of up to date knowledge on past ocean circulation The key topics include Modern thermohaline circulation and main stages of its development during the Cenozoic Methods and proxies of paleoceanographic reconstruction Variability of the meridional overturning circulation and paleoceanographic events in the North Atlantic during the last climatic cycle Influence of the global thermohaline circulation on paleoceanographic events in the Eurasian Arctic seas the Northern Indian Ocean and the South China Sea The role of the thermohaline circulation in global teleconnections in the Antarctic Eurasian Arctic northern Pacific and low latitudes Indo Pacific Comprehensive investigation of hundreds of international publications and her own results convinced the author that the global thermohaline circulation controls the remote teleconnections on

millennial scale and partly on centennial scale while short term climate signals are mainly transferred by the atmosphere. This revised and extended English edition provides the latest unpublished data, new figures and modeling results. The extensive reference list contains more than 100 publications and 140 new references. Climate Change & Naval War Arnd Bernaerts, 2005. Modern climate shows two major climate shifts 1918 and 1939 caused by thousands of naval ships churning seas and oceans during two World Wars that determined global climate change conditions. Arctic Ocean Sediments: Processes, Proxies, and Paleoenvironment R. Stein, 2008-07-22. Although it is generally accepted that the Arctic Ocean is a very sensitive and important region for changes in the global climate, this region is the last major physiographic province of the earth whose short and long term geological history is much less known in comparison to other ocean regions. This lack of knowledge is mainly caused by the major technological logistic problems in reaching this harsh ice covered region with normal research vessels and in retrieving long and undisturbed sediment cores. During the last about 20 years, however, several international and multidisciplinary ship expeditions including the first scientific drilling on Lomonosov Ridge in 2004, a breakthrough in Arctic research were carried out into the central Arctic and its surrounding shelf seas. Results from these expeditions have greatly advanced our knowledge on Arctic Ocean paleoenvironments. Published syntheses about the knowledge on Arctic Ocean geology on the other hand are based on data available prior to 1990. A comprehensive compilation of data on Arctic Ocean paleoenvironment and its short and long term variability based on the huge amount of new data including the ACEX drilling data has not been available yet. With this book presenting 1) detailed information on glacio marine sedimentary processes and geological proxies used for paleoenvironmental reconstructions and 2) detailed geological data on modern environments, Quaternary variability on different time scales as well as the long term climate history during Mesozoic Tertiary times, this gap in knowledge will be filled. Aimed at specialists and graduates. Presents background research, recent developments and future trends. Written by a leading scholar and industry expert.
