Languages in Seventeenth and Early Eighteenth-century Imaginary Voyages Paul Cornelius, 1965 **Nobel Universal Graphical Language** Milan Randic, 2010-05-24 Nobel is a pictographic language based on some 120 basic signs and many arrows of different shape that are mutually combined It is named after Alfred Nobel 1833-1896 Swedish chemist and industrialist inventor of dynamite who left most of his fortune to a foundation that annually gives awards to individuals whose work is characterized as greatest benefit to mankind known as Nobel Prizes Besides the awards for sciences and literature significantly Alfred Nobel included among others a prize for peace that besides individuals also organizations may obtain Although it would be utopian to believe that human conflicts could be avoided if communication tools would improve the emergence of universal languages certainly cannot make the situation worse Universal languages are a communication tool which makes it possible for people of no common language to communicate They are graphic but they should be distinguished from picture writings which only passively offer information on some event or give messages Universal languages have more similarity with the sign languages that are used for people who lost hearing or the sign language of American Plains Indians who spoke different languages and could communicate by sign language that they developed However written language has some advantages over hand sign languages in that one can

communicate at a great distance particularly today in the age of fax and computer communications and that one can leave messages for posterity This is not the place to argue for or against the promise of written sign languages Graphic written sign languages exist today and the best known are Chinese characters used in China and Japan The problem with Chinese characters is that there are too many characters and it is difficult to learn so many It takes years for children in China and Japan to learn so many different characters and the task would be even harder for grown people to learn if they have not done this when young Nobel is designed to remove this difficulty and is based on the following requirements 1 SMALL NUMBER OF BASIC SIGNS 2 SIGNS SHOULD BE EASY TO RECOGNIZE 3 SIGNS SHOULD BE EASY TO REPRODUCE 4 COMBINATIONS LIMITED TO THREE SIGNS 5 COMPLEMENTARY We have already mentioned that Nobel uses about 120 basic signs which can be viewed as a small number particularly in view of over 100 signs of Nobel that are so obvious that they can be easily absorbed The other requirements are also very important There are many signs that can be easily recognized but in order to be acceptable for Nobel they also need to be easily reproduced because that will facilitate communication Also when making combinations of signs one has to make some restriction in order to maintain clarity so we decided to have no more than three signs combined into single word Finally the last requirement that of complementarities needs some explanation Besides having signs that one can easily recognize and easily draw one needs some structure to be embedded into composition of signs that facilitates one to remember and learn signs easily We refer to this structure as complementary or broadly speaking associational and what it implies is that words and objects that are related should have related signs Thus for example pairs of words like man woman cat dog coffee tea good bad love hate etc should have signs that are in some opposition while words like smoke flame fire tree wood forest water sea ocean good better best should have signs that are in competition With this in mind when one sees and learns the basic signs the meaning of many combinations of signs can be in advance anticipated This helps one to learn Nobel rather fast not months not weeks perhaps not even days but a couple of hours may suffice that one may learn hundreds and hundreds of words In this respect Nobel may be unique among languages written spoken of

Miles MacLeod, Rocío G. Sumillera, Jan Surman, Ekaterina Smirnova, 2016-01-29 Language is the most essential medium of scientific activity Many historians sociologists and science studies scholars have investigated scientific language for this reason but only few have examined those cases where language itself has become an object of scientific discussion Over the centuries scientists have sought to control refine and engineer language for various epistemological communicative and nationalistic purposes This book seeks to explore cases in the history of science in which questions or concerns with language have bubbled to the surface in scientific discourse This opens a window into the particular ways in which scientists have conceived of and construed language as the central medium of their activity across different cultural contexts and places and the clashes and tensions that have manifested their many attempts to engineer it to both preserve and enrich its function The subject of language draws out many topics that have mostly been neglected in the history of science such as the connection between the emergence of national languages and the development of science within national settings and allows us to connect together historical episodes from many understudied cultural and linguistic venues such as Eastern European and medieval Hebrew science      **Resources in Education** ,1981      Encyclopaedia Metropolitana, Or, Universal

Dictionary of Knowledge: Pure sciences Edward Smedley, Hugh James Rose, Henry John Rose, 1845      **Encyclopaedia Metropolitana; Or, Universal Dictionary of Knowledge, on an Original Plan ... with ... Engravings: Pure sciences** ,1845      **The Universal Right to Education** Joel Spring, 2000-04 In this book Joel Spring offers a powerful and closely reasoned justification and definition for the universal right to education applicable to all cultures as provided for in Article 26 of the United Nations Universal Declaration of Human Rights One sixth of the world's population nearly 855 million people are functionally illiterate and 130 million children in developing countries are without access to basic education Spring argues that in our crowded global economy educational deprivation has dire consequences for human welfare Such deprivation diminishes political power Education is essential for providing citizens with the tools for resisting totalitarian and repressive governments and economic exploitation What is to be done The historically grounded highly original analysis and proposals Spring sets forth in this book go a long way toward answering this urgent question Spring first looks at the debates leading up to the Universal Declaration of Human Rights in 1948 to see how the various writers dealt with the issue of

cultural differences These discussions provide a framework for examining the problem of reconciling cultural differences with universal concepts He next expands on the issue of education and cultural differences by proposing a justification for education that is applicable to indigenous peoples and minority cultures and languages This justification is then applied to all people within the current global economy Acknowledging that the right to an education is inseparable from children's rights he uses the concept of a universal right to education to justify children's rights and in turn applies his definition of children's liberty rights to the concept of education His synthesis of cultural language and children's rights provides the basis for a universal justification and definition for the right to education which in the concluding chapters Spring uses to propose universal guidelines for human rights education and instruction in literacy numeracy cultural centeredness and moral economy

George Dalgarno on Universal Language David Cram, Jaap Maat, 2001-07-05 George Dalgarno's *Art of Signs Ars Signorum* 1661 was the first work in the seventeenth century to present a fully elaborated universal language constructed on philosophical principles It contains a wealth of observations on human language and the nature of representation in general and the author takes issue with leading philosophers of his day notably Hobbes and Descartes on epistemological and logical questions By including the first complete English translation alongside the Latin the present edition makes this seminal text accessible to a wider audience The text is further elucidated by a previously unpublished autobiographical tract in which Dalgarno describes the development of his ideas and his discussions with John Wilkins who eventually was to produce a rival universal language scheme In this tract Dalgarno provides in unprecedented detail a lucid account of the major issues involved in the debate on the structure of a philosophical language Further tracts by Dalgarno reprinted here illustrate other facets of his thought These include a series of broadsheets in which he advertised his scheme *The Deaf and Dumb Man's Tutor* 1680 which contains some original observations concerning the teaching of language to the deaf and a treatise on *Double Consonants* one of the earliest treatments of phonotactics In bringing together for the first time the full range of Dalgarno's linguistic work which has striking resonance with modern work in universal grammar and cognitive science the present volume gives ready access to the ideas of this original and stimulating thinker

### **The Unity of Reason :**

**Rereading Kant** Susan Neiman Professor of Philosophy Tel Aviv University, 1994-05-26 *The Unity of Reason* is the first major study of Kant's account of reason It argues that Kant's wide ranging interests and goals can only be understood by redirecting attention from epistemological questions of his work to those concerning the nature of reason Rather than accepting a notion of reason given by his predecessors a fundamental aim of Kant's philosophy is to reconceive the nature of reason This enables us to understand Kant's insistence on the unity of theoretical and practical reason as well as his claim that his metaphysics was driven by practical and political ends Neiman begins by discussing the historical roots of Kant's conception of reason and by showing Kant's solution to problems which earlier conceptions left unresolved Kant's notion of reason itself is examined through a discussion of all the activities Kant attributes to reason In separate chapters discussing

the role of reason in science morality religion and philosophy Neiman explores Kant's distinctions between reason and knowledge and his difficult account of the regulative principles of reason Through examination of these principles in Kant's major and minor writings *The Unity of Reason* provides a fundamentally new perspective on Kant's entire work Universal Languages and Scientific Taxonomy in the Seventeenth Century M. M. Slaughter,1982-09-23 Examines highly regarded proposals during the seventeenth century for an artificial language intended to replace Latin as the international medium of communication *The Brain from 25,000 Feet* Mark A. Changizi,2013-06-29 In *The Brain from 25 000 Feet* Mark A Changizi defends a non reductionist philosophy and applies it to a variety of problems in the brain sciences Some of the key questions answered are as follows Why do we see visual illusions and why are illusions inevitable for any finite speed vision machine Why aren't brains universal learning machines and what does the riddle of induction and its solution have to do with human learning and innateness The author tackles such questions as why the brain is folded and why animals have as many limbs as they do explaining how these relate to principles of network optimality He describes how most natural language words are vague and then goes on to explain the connection to the ultimate computational limits on machines There is also a fascinating discussion of how animals accommodate greater behavioral complexity This book is a must read for researchers interested in taking a high level non mechanistic approach to answering age old fundamental questions in the brain sciences
