Problem J D Lambert Professor of Numerical Analysis University of Dundee Scotland In 1973 the author published a book entitled Computational Methods in Ordinary Differential Equations Since then there have been many new developments in this subject and the emphasis has changed substantially This book reflects these changes it is intended not as a revision of the earlier work but as a complete replacement for it Although some basic material appears in both books the treatment given here is generally different and there is very little overlap In 1973 there were many methods competing for attention but more recently there has been increasing emphasis on just a few classes of methods for which sophisticated implementations now exist This book places much more emphasis on such implementations and on the important topic of stiffness than did its predecessor Also included are accounts of the structure of variable step variable order methods the Butcher and the Albrecht theories for Runge Kutta methods order stars and nonlinear stability theory The author has taken a middle road between analytical rigour and a purely computational approach key results being stated as theorems but proofs being provided only where they aid the reader's understanding of the result Numerous exercises from the straightforward to the demanding are included in the text This book will appeal to advanced students and teachers of numerical analysis and to users of numerical methods who wish to understand how algorithms for ordinary differential systems work and on occasion fail to work
