Critical Thinking boxes are located in every chapter with relevant questions and exercises to apply what you have learned to clinical practice. Evidence Based Practice boxes focus on the research evidence that supports clinical practice. Real life scenarios in each chapter illustrate and personalize the chapter topics. An emphasis on making the transition into the workplace is included in chapters such as NCLEX RN and the New Graduate Employment Considerations. Opportunities, Resumes and Interviewing and Mentoring and Preceptorship. A companion Evolve website includes Case Studies for every chapter, test taking strategies, a sample NCLEX test tutorial, a sample NCLEX exam, appendices and resume builder templates for creating professional resumes and cover letters.

**Key Debates in Psychiatric/Mental Health Nursing** John R Cutcliffe, Martin Ward, 2006-10-12. This book is unique because no other psychiatric mental health nursing text has ever brought together opposing or contrasting views of the same issue and subsequently invited two separate chapters to be written in order to articulate the different perspectives in the debate. Further, no book has then followed up such a wide and thorough discussion by inviting a third party to offer commentary. The purpose of this book is to present a range of key issues that psychiatric mental health nurses face. They are practice, policy, research and education related issues. The purpose then is to present the most complete, balanced arguments possible in order to inform, educate and stimulate psychiatric mental health nurses. Furthermore, the purpose of the book is to make psychiatric mental health nurses more aware of the often uncertain nature of much of psychiatric mental health nursing practice and knowledge. Psychiatric mental health nursing is not characterised by black and white, easily delineated issues and is perhaps characterised by various shades of grey. Indeed, it is often stated as axiomatic that psychiatric mental health nurses can be described as a broad church. Consequently, the purpose of this book is to help psychiatric mental health nurses appreciate this broad church, be able to understand the various shades of grey, be able to understand that often there are differing views, inconclusive arguments and contentious debates and for this to influence their clinical practice. As the international range of contributors illustrates, these debates to a greater or lesser extent are issues and debates that psychiatric mental health nurses face the world over; these are matters of real international importance and significance. These issues have been touched upon and to a limited extent debated at

psychiatric mental health nursing conferences and to an even lesser extent within some psychiatric mental health nursing journals. Thus they are real issues that many nurses are facing talking about and trying to resolve. Key debates are presented with arguments from opposing viewpoints followed by a third party commentary to give readers the necessary information to form their own view. Written by a range of international authors from different countries across three continents, one of the first psychiatric mental health nursing books to explore the pedagogical value of debate.
