

# Nursing Diagnosis

## Chapter 17

### Review

Data collection begins when a nurse cares for a patient the first time, and continues everytime the nurse cares for that patient.

A nursing diagnosis is made when a nurse identifies a health-related problem or the potential to develop a problem based on patient data.

Nursing diagnosis is the second step of the nursing process.

### Types of diagnosis(3)

(Using standardized terminology is essential for diagnostic clarity and effective team communication)

- Medical Diagnoses
- Nursing Diagnoses
- Collaborative Problems

#### Medical Diagnoses

- A medical diagnosis is the identification of a disease condition based on a specific evaluation of:
  - physical signs and symptoms
  - Patient's medical history
  - Results of diagnostic test and procedures
- The use of medical diagnosis began in ancient China, Egypt, and Greece. Practitioners used diagnoses to describe the symptoms for many illnesses thousands of years ago.
- Medical diagnosis is the language medical practitioners use to communicate a patient's health problem and associated treatments and response.

For example: In the case of diabetes, health care practitioners will order various medications and tests such as a hemoglobin A1c (HbA1c) to manage a patient's blood glucose.
