*Alcohol, Drugs of Abuse, and Immune Functions* Ronald R. Watson, 1995-05-04 Substance abusers are an immunocompromised population vulnerable to a wide array of new and resurgent infectious diseases in spite of modern treatment For example opportunistic infections like tuberculosis are the principal cause of morbidity and mortality in HIV positive patients Alcohol and drug induced disorders are wide ranging gaining prominence as the spectrum of emerging diseases broadens Alcohol Drugs of Abuse and Immune Functions reviews the role of these immunosuppressants as cofactors in disease It covers the basic biology and immunology of impairments to defense against infectious disease Alcohol and drug use is consistently associated with immunosuppression although it isn't known if it is the substance itself a metabolite or an indirect effect that alters disease resistance This text explores the advances toward answering this question examines alcohol in different settings its relationship to important cells and the effects it can have on vital organs such as the liver and the lungs

**Infectious Diseases** Chris E Taylor,2022-02-16 Listed in the 1997 edition of Doody s Rating Service A Buyer s Guide to the 250 Best Health Sciences Books Until recently it had been presumed that chemotherapy was sufficient to control tuberculosis TB However it has been estimated that this disease will claim more than 30 million lives in the coming decade The emergence of multidrug resistant strains the lack of patient adherence to therapy and the resultant growing number of TB

cases has made it clear that alternative approaches to fight this disease must be taken. Nutritional Abnormalities in Infectious Diseases: Effects on Tuberculosis and AIDS focuses on nutritional factors in relation to tuberculosis and AIDS to help you better understand and treat these diseases. Health care providers and researchers can refer to this valuable resource to identify the most crucial nutritional determinants involved in the control of TB, outline the nutrient-sensitive host defense mechanisms involved, define the effects of malabsorption and drug-drug interactions, and demonstrate the effects of co-infection with HIV on the incidence of TB. Representing the findings of a symposium held during the 94th General Meeting of the American Society for Microbiology in Las Vegas, Nevada, Nutritional Abnormalities in Infectious Diseases is the work of several outstanding scientists who were invited to make presentations on selected aspects of nutrition and infectious diseases. They give you valuable information about the effects of malnutrition on host immune parameters, intracellular host defense mechanisms, phagocytosis, the role of cytokines, immune function, vitamin A, zinc, and protein deficiency, malnutrition, and the developing world. While the role of adequate nutrition in maintaining a healthy individual is certainly well known, the findings in Nutritional Abnormalities in Infectious Diseases uncover the role of nutrition in the progression of tuberculosis and AIDS, a matter of great economic and public health significance. Intended for researchers, practitioners, and health care providers in colleges, universities, and government institutions, this important session was sponsored in part by the Respiratory Disease Branch, Division of Microbiology, Infectious Diseases, NIAID.
