A. Rolls, Ann Walker, 2013-11-11 Few people doubt that the mother's milk provides the best food for the full term infant during the first few months of life when the digestive absorptive and excretory systems are relatively immature The development of the digestive enzymes is detailed in Chapter 4 The significance of this immaturity first emerged as a consequence of the pioneering work of Professor Robert McCance and Dr Elsie Widdowson in human nutrition when they studied the electrolyte and nitrogen excretion of babies and young animals To quote Professor McCance Inefficient though the kidneys were by adult standards they were capable of maintaining homeostasis provided the infant and animals were growing while being fed on food of exactly the right composition that is the milk of the mother Ashwell 1993 One should not forget that although the mother protects the developing baby against much nutritional abuse the baby may be still be affected by maternal nutrition and this is discussed in Chapter 2 The superior qualities of breast milk are still recognized and research continues to discover yet more factors in breast milk significant to the health of the baby for possible inclusion in formulas The immature stage of development of the baby means that while enough nutrients for optimal growth of all tissues are required excessive quantities may cause intoxication Tight specifications are essential since unlike the adult the newborn depends on a single food Feeding Infants and Children from Birth to 24 Months National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Food and Nutrition Board, Committee on Scoping Existing Guidelines for Feeding Recommendations for Infants and Young Children Under Age 2, 2020-08-28 Recommendations for feeding infants and young children have changed substantially over time owing to scientific advances cultural influences societal trends and other factors At the same time stronger approaches to reviewing and synthesizing scientific evidence have evolved such that there are now established protocols for developing evidence based health recommendations However not all authoritative bodies have used such approaches for developing infant feeding guidance and for many feeding questions there is little or no sound evidence available to guide best practices despite the fact that research on infant and young child feeding has expanded in recent decades Summarizing the current landscape of feeding recommendations for infants and young children can reveal the level of consistency of existing guidance shed light on the types of evidence that underpin each recommendation and provide insight into the feasibility of harmonizing guidelines Feeding Infants and Children from Birth to 24 Months collects compares and summarizes existing recommendations on what and how to feed infants and young children from birth to 24 months of age This report makes recommendations to stakeholders on strategies for communicating and disseminating feeding recommendations **Feeding and Nutrition of Infants and Young Children** Kim Fleischer Michaelsen, 2000-01-06 Optimum nutrition and good feeding of infants and young children are key determinants of their health growth and development both physical and mental Good feeding practices will prevent malnutrition and early growth
