Offshore Site Investigation and Foundation Behaviour D.A. Arduş, D. Clare, A. Hill, R. Hobbs, R.J. Jardine, J.M. Squire, 2013-04-17 Two main areas of offshore activity are addressed in this book Site investigation on assessment and Applications and foundation engineering The 37 contributions from a wide ranging group of international experts are resulting from the Offshore Site Investigation and Foundation Behaviour Conference London U K September 1992 Adequate determination of site conditions can only be achieved by the integrated approach of using geological geophysical and geotechnical data Developments in data acquisition techniques are illustrated through case histories in the section on Geotechnical Sampling and Testing In the section on Advanced Interpretation Techniques and Integrated Interpretations the state of the art of these topics is also illustrated by case histories A review of foundation behaviour is presented in the section on Gravity Foundations Foundation Performance Monitoring Piling Research and Design Criteria These topics are illustrated in the light of field experience and recent research in particular that involving full scale tests and monitoring This book provides many illustrative figures and much pertinent information to exploration and marine geophysicists petroleum and offshore engineers and for researchers working these fields

Advances in Subsea Pipeline Engineering and Technology C.P. Ellinas, 2012-12-06 Dr C P Ellinas Advanced Mechanics flexible pipelines pipeline design fabrication and installation deepwater applications Advances in North Sea technology over the last few years have been concerned mostly with marginal fields small diameter pipelines and new materials which are well covered in the first three topics Economic development of marginal fields requires processing of oil and gas to take place not at the wellhead but at existing facilities usually some distance away Hydrocarbons are thus often transported at high pressure and temperature in small diameter pipelines which need to be protected through trenching However such operational practice has brought to the fore a problem that in the past was of little concern namely upheaval buckling

Subtech '89 Society for Underwater Technology (SUT), 1990-04-30 The conference organized jointly by the International Association of Underwater Engineering Contractors and the Society for Underwater Technology was held in November 1989. The three sessions cover changing requirements for underwater inspection and maintenance developments in remotely controlled technology and advances in diving safety. No index. Subsea Control and Data Acquisition Society for Underwater Technology (SUT), 1990-03-31 The biennial conferences of the Society for Underwater Technology have achieved an excellent reputation for the quality of their presentations which cover topics of the most acute current interest as well as those at the forefront of review and development. The 1994 conference on Subsea Control and Data Acquisition formed no exception since it covers subjects at the cutting edge of modern technology. It is a matter of increasing concern that products are becoming overspecified resulting in excessive costs and longer development schedules while not conferring an equivalent benefit in reliability of the finished product. Subsea Control and Data Acquisition is vital reading for all subsea control system designers, manufacturers and operators, equipment consultants, application engineers, academics in the subsea engineering field and all subsea engineers.

Wave Kinematics and Environmental Forces Society for Underwater Technology (SUT), 2013-03-14 In determining the response of offshore structures it is of utmost importance to determine in the most correct manner all factors which contribute to the total force acting on these structures. Applying the Morison formula Morison et al 1950 to calculate forces on offshore slender structures, uncertainties related to the understanding of the wave climate, the hydrodynamic force coefficients and the kinematics of ocean waves represent the most important contributions to the uncertainties in the prediction of the total forces on these structures. Haver and Gudmestad 1992. Traditional calculation of forces on offshore structures involves the use of regular waves with the following nonlinearities incorporated: use of regular wave theories incorporating higher order terms; use of Morison equation having a nonlinear drag term; inclusion of the effect of the free surface by integrating all contributions to total forces and moments from the sea floor to the free surface of the waves. In order to describe the sea more realistically the ocean surface is to be described as an irregular sea surface represented by its energy spectrum. The associated decomposition of the sea surface is given as a linear sum of linear waves. The total force is found by integrating the contribution from all components in the wave spectrum to the free surface. The kinematics of each component must therefore be determined.

Developments in Diving Technology Society for

Underwater Technology (SUT),1985-03-31 Up to about 30 years ago diving activity was centred primarily on the naval services who provided a lead in the development of equipment techniques and procedures Apart from one or two spectacular salvage undertakings the main commercial activity up until that time was fairly low key work in docks and harbours The concept of saturation diving emerged from subsea habitats of which Captain Cousteau was one of the pioneers This led the way to commercial development in support of exploration and the production of offshore oil and gas and I believe that my friend Henri Delauze was one of the first to mount the subsea habitat on deck and provide a sealed bell to convey divers from the habitat to the seabed without change of pressure A remarkable feature of offshore oil and gas technology in the North Sea has been the willingness of all concerned to exchange information regarding R D This has had a major effect on the advance in technology over the last few years As far as diving is concerned it is to some extent Hobson s Choice Legal patents are difficult to achieve in this field and the casual nature of diver employment to date has meant that ideas and techniques circulate almost as freely as the divers themselves In addition the advertising of the new technologies which one has to offer almost automatically means disclosure of what otherwise might be secret
