Path Integrals On Group Manifolds Representationindependent Propagators For General Lie Groups:

Path Integrals On Group Manifolds, Representation-independent Propagators For General Lie Groups

Wolfgang Tome,1998-03-31 The quantization of physical systems moving on group and symmetric spaces has been an area of active research over the past three decades This book shows that it is possible to introduce a representation independent propagator for a real separable connected and simply connected Lie group with irreducible square integrable representations For a given set of kinematical variables this propagator is a single generalized function independent of any particular choice of fiducial vector and the irreducible representations of the Lie group generated by these kinematical variables which nonetheless correctly propagates each element of a continuous representation based on the coherent states associated with these kinematical variables Furthermore the book shows that it is possible to construct regularized lattice phase space path integrals for a real separable connected and simply connected Lie group with irreducible square integrable representations and although the configuration space is in general a multidimensional curved manifold it is shown that the resulting lattice phase space path integral has the form of a lattice phase space path integral on a multidimensional flat manifold Hence a novel and extremely natural phase space path integral quantization is obtained for general physical systems whose kinematical variables are the generators of a connected and simply connected Lie group This novel phase space path integral quantization is a exact b more general than and c free from the limitations of the previously considered path integral quantizations of free physical systems moving on group manifolds To illustrate the general theory a representation independent propagator is explicitly constructed for SU 2 and the affine group Path Integrals on Group Manifolds Wolfgang Tom□,1998 The author explains the theory clearly and the book is almost self contained Contemporary Physics 2000 *Mathematical Reviews* ,1998 *Subject Guide to Books in Print* ,1991 Books In Print 2004-2005 Ed Bowker Staff,Staff Bowker, Ed,2004 *Physics Briefs* ,1991 *INIS Atomindex* ,1994 Comprehensive Dissertation Index ,1989 **Nuclear Science Abstracts** ,1973 Path Integrals on Manifolds with Boundary and Their Asymptotic Expansions Matthias Ludewig,2016 It is scientific folklore coming from physical heuristics that solutions to the heat equation on a Riemannian manifold can be represented by a path integral However the problem with such path integrals is that they are notoriously ill defined One way to make them rigorous which is often applied in physics is finite dimensional approximation or time slicing approximation Given a fine partition of the time interval into small subintervals one restricts the integration domain to paths that are geodesic on each subinterval of the partition These finite dimensional integrals are well defined and the infinite dimensional path integral then is defined as the limit of these suitably normalized integrals as the mesh of the partition tends to zero In this thesis we show that indeed solutions to the heat equation on a general compact Riemannian manifold with boundary are given by such time slicing path integrals Here we consider the heat equation for general Laplace type operators acting on sections of a vector bundle We also obtain similar results for the heat kernel

although in this case one has to restrict to metrics satisfying a certain smoothness condition at the boundary One of the most important manipulations one would like to do with path integrals is taking their asymptotic expansions in the case of the heat kernel this is the short time asymptotic expansion In order to use time slicing approximation here one needs the approximation to be uniform in the time parameter We show that this is possible by giving strong error estimates Finally we apply these results to obtain short time asymptotic expansions of the heat kernel also in degenerate cases i e at the cut locus Furthermore our results allow to relate the asymptotic expansion of the heat kernel to a formal asymptotic expansion of the infinite dimensional path integral which gives relations between geometric quantities on the manifold and on the loop space In particular we show that the lowest order term in the asymptotic expansion of the heat kernel is essentially given by the Fredholm determinant of the Hessian of the energy functional We also investigate how this relates to the zeta regularized determinant of the Jacobi operator along minimizing geodesics
