211 Medical Therapies In The World PART-2 Brijpal Singh Chouhan, 2020-02-24

This ebook is written for knowledge and educational purpose. First of all, thanks to you that you are interested about to know awesome cultures like Medical Therapies by this ebook. So we are providing to you all about therapies that were existed or now exist all over world. Although we have tried our best that all information and content of this ebook is true and correct. But if some information is not correct then we would not be responsible for that and we are very sorry for that information. This is second Part of 211 Medical Therapies in The World Part 2 Ebook Series because there have more and much therapies in the world. We can say that you would not have listened name of maximus therapies. For your ease we are divided some therapies in every some parts. So we are providing this Ebook Series in three parts. Therapy is the attempted remediation of a health problem usually following a diagnosis. In the medical field it is usually synonymous with treatment. Among psychologists and other mental health professionals including psychiatrists, psychiatric nurse practitioners, and clinical social workers, the term may refer specifically to psychotherapy, sometimes dubbed talking therapy. The English word therapy comes via Latin *therapia* from and literally means curing or healing. As a rule, each therapy has indications and contraindications. The words care, therapy, treatment, and intervention overlap in a semantic field and thus they can be synonymous depending on context. Moving rightward through that order, the connotative level of holism decreases and the level of specificity to concrete instances increases. Thus in health care contexts where its senses are always non-count, the word care tends to imply a broad

idea of everything done to protect or improve someone's health for example as in the terms preventive care and primary care which connote ongoing action although it sometimes implies a narrower idea for example in the simplest cases of wound care or post anesthesia care a few particular steps are sufficient and the patient's interaction with that provider is soon finished
