philosophies Tompkins takes us from the savannas of Africa to the earth's first cities to the early days of the great faith traditions of both East and West. Along the way he shows that despite what many of us have been taught the world's various spiritual traditions all have profoundly meaningful things to say about the animal soul if we simply know where to look. Rescuing these ancient insights and blending them with vivid stories about animals today from a dwarf rabbit named Angus to a manatee named Moose to a black bear named Little Bit, *The Divine Life of Animals* paints a gloriously inclusive picture of the cosmos as a place made up of both matter and spirit in which animals are every bit as important spiritually speaking as the humans with whom they share the world. Though it is startlingly original, *The Divine Life of Animals* also feels strangely and instantly familiar for it reveals truths that many of us have held in our hearts already waiting only for someone to give fresh voice to one of the oldest and most trustworthy intuitions we possess. *The Divine Life of Animals* offers a compelling and timeless vision of the relationship between humans and animals that will have you looking at the animals in your life with new eyes.

All-Time Nines Don Cox, 2016-02-03 Who was the best baseball team of all time? This timeless question can most effectively be answered through comprehensive analysis of baseball statistics. Over the course of a season, winning teams tend to score more runs while allowing fewer than their opponents. The greater the difference in runs per game, the more a team can be expected to win. Comparing this data for the top five percent of Major League teams from 1901 through 2014, this book argues that runs above league average is the best statistic for ranking teams. The author sorts 220 teams by era, franchise, and skills: hitting, fielding, baserunning, pitching. He evaluates their strengths and weaknesses and assigns numerical values to each player's skills to demonstrate how they contributed to team performance. Planting in a Post-Wild World Thomas Rainer, Claudia West, 2016-02-04 This post-wild landscape guide is an optimistic call to action to help gardeners create a harmonious environment by incorporating plant communities. Chicago Tribune: Over time, with industrialization and urban sprawl, we have driven nature out of our neighborhoods and cities. But we can invite it back by designing landscapes that look and function more like they do in the wild: robust, diverse, and visually harmonious. Featuring gorgeous photography and advice for landscapers, *Planting in a Post-Wild World* by Thomas Rainer and Claudia West is dedicated to the idea of a new nature: a hybrid of both the wild and the cultivated that can flourish in our cities and suburbs.

Where The Sky Began John Madson, 2009-11 It was a flowing emerald in spring and summer when the boundless winds ran across it, a tawny ocean under the winds of autumn and a stark and painful emptiness when the great long winds drove in from the northwest. It was Beulahland for many, Gehenna for some. It was the tall prairie from the Prologue. Originally published in 1982, *Where the Sky Began*, John Madson's landmark publication, introduced readers across the nation to the wonders of the tallgrass prairie, sparking the current interest in prairie restoration. Now back in print, this classic tome will serve as inspiration to those just learning about the heartland's native landscape and rekindle the passion of long-time prairie enthusiasts. *Green*

Equilibrium Christopher Wills, 2013-03-28 In *Green Equilibrium* Christopher Wills explains the rules by which ecosystems maintain a diversity of interdependent species in particular the balance of predators and prey Wills is both an eminent academic and a hugely experienced field biologist In presenting the concept of green equilibrium he draws on a fascinating range of examples including coral reefs off the densely populated Philippines the isolated and densely forested valleys of Papua New Guinea the changing Himalayan kingdom of Bhutan and a Californian ranch being allowed to return to a wild state In each case he assesses the impact of modern changes and attempts at conservation on these delicately balanced ecosystems Wills shows how human populations too are an integral part of the picture We now know from genetic evidence that over the course of history as humans spread out of Africa populations adapted as a result of environmental conditions Striking new evidence indicates that some human populations carry genes from past encounters with other hominids Neanderthals and Denisovans as well as genetic adaptations to local hazards such as malaria Wills argues that the most effective approaches to conserving green equilibria come out of evolutionary insights and from close involvement of the local communities who have lived and adapted to them

The Gnu's World Richard Estes, 2014-04-12 This is the first scholarly book on the antelope that dominates the savanna ecosystems of eastern and southern Africa It presents a synthesis of research conducted over a span of fifty years mainly on the wildebeest in the Ngorongoro and Serengeti ecosystems where eighty percent of the world's wildebeest population lives Wildebeest and other grazing mammals drive the ecology and evolution of the savanna ecosystem Richard D Estes describes this process and also details the wildebeest's life history focusing on its social organization and unique reproductive system which are adapted to the animal's epic annual migrations He also examines conservation issues that affect wildebeest including range wide population declines

Quaternary Extinctions Paul S. Martin, Richard G. Klein, 2022-01-04 What caused the extinction of so many animals at or near the end of the Pleistocene Was it overkill by human hunters the result of a major climatic change or was it just a part of some massive evolutionary turnover Questions such as these have plagued scientists for over one hundred years and are still being heatedly debated today *Quaternary Extinctions* presents the latest and most comprehensive examination of these questions *Geological Magazine* May be regarded as a kind of standard encyclopedia for Pleistocene vertebrate paleontology for years to come American Scientist Should be read by paleobiologists biologists wildlife managers ecologists archeologists and anyone concerned about the ongoing extinction of plants and animals *Science* Uncommonly readable and varied for watchers of paleontology and the rise of humankind *Scientific American* Represents a quantum leap in our knowledge of Pleistocene and Holocene palaeobiology Many volumes on our bookshelves are destined to gather dust rather than attention But not this one Nature Two strong impressions prevail when first looking into this epic compendium One is the judicious balance of views that range over the whole continuum between monocausal cultural or environmental explanations The second is that both the data base and theoretical sophistication of the protagonists in the

debate have improved by a quantum leap since 1967 American Anthropologist The Insurmountable Darkness of Love Douglas E. Christie, 2022 This book is a reflection on the meaning of spiritual darkness especially those difficult places in human experience where meaning seems to elude us where we are emptied out and are compelled to dig deeper into who we truly are Douglas E Christie takes up this facet of experience in ordinary human experience but also in relation to the Christian contemplative and mystical traditions where such experience is often understood to be both painful and transformative allowing the mind and heart to open in love

Ecopsychology, Phenomenology, and the Environment Douglas A. Vakoch, Fernando Castrillón, 2014-02-17 This book seeks to confront an apparent contradiction that while we are constantly attending to

environmental issues we seem to be woefully out of touch with nature The goal of Ecopsychology Phenomenology and the Environment is to foster an enhanced awareness of nature that can lead us to new ways of relating to the environment ultimately yielding more sustainable patterns of living This volume is different from other books in the rapidly growing field of ecopsychology in its emphasis on phenomenological approaches building on the work of phenomenological psychologists such as Maurice Merleau Ponty This focus on phenomenological methodologies for articulating our direct experience of nature serves as a critical complement to the usual methodologies of environmental and conservation psychologists who have emphasized quantitative research Moreover Ecopsychology Phenomenology and the Environment is distinctive insofar as chapters by phenomenologically sophisticated ecopsychologists are complemented by chapters written by phenomenological researchers of environmental issues with backgrounds in philosophy and geology providing a breadth and depth of perspective not found in other works written exclusively by psychologists

When the Last Lion Roars Sara Evans, 2018-06-14 The illegal killing of Cecil a famous and magnificent black maned Zimbabwean lion by an American big game hunter in 2015 sparked international outrage More significantly it drew the world's attention to the devastating plight of Africa's lions A century ago there were more than 200 000 wild lions living in Africa Today with that population reduced by more than 90 per cent many experts believe that without effective conservation plans Africa's remaining wild lions could be completely wiped out by the mid half of this century When the Last Lion Roars explores the historic rise and fall of the lion as a global species and examines the reasons behind its catastrophic decline Interwoven with vivid personal encounters of Africa's last lions Sara Evans questions what is being done to reverse or at least stem this population collapse and she considers the importance of human responsibility in this decline and more crucially in their conservation From the Lion Guardians in Kenya to the Living Walls of Tanzania and the Hwange Lion Research Project in Zimbabwe Sara meets both lions and their champions people who are fighting to bring this iconic species back from the brink of extinction

Worlds in One Country Denis Hirson, 2011 Worlds in one country is a compact inclusive history of writing in South Africa from the nineteenth century to 1994 that crosses boundaries of language and colour including prose poetry and theatre

Thinking Through Style Michael Dominic Hurley, Marcus Waithe, 2018 What is style and how does it relate to thought in language It has often been treated as something merely linguistic independent of thought ornamental stylishness for its own sake Or else it has been said to subserve thought by mimicking delineating or heightening ideas that are already expressed in the words This ambitious and timely book explores a third more radical possibility in which style operates as a verbal mode of thinking through Rather than figure thought as primary and pre verbal and language as a secondary delivery system style is conceived here as having the capacity to clarify or generate thinking The book s generic focus is on non fiction prose and it looks across the long nineteenth century Leading scholars survey twenty authors to show where writers who have gained reputations as either stylists or as thinkers exploit the interplay between the what and the how of their prose The study demonstrates how celebrated stylists might after all have thoughts worth attending to and that distinguished thinkers might be enriched for us if we paid more due to their style More than reversing the conventional categories this innovative volume shows how style and thinking can be approached as a shared concern At a moment when especially in nineteenth century studies interest in style is re emerging this book reevaluates some of the most influential figures of that age re imagining the possible alliances interplays and generative tensions between thinking thinkers style and stylists
