Primary Care Case Studies for Nurse

Practitioners Lydia Burke, 2008 Practice nurses and nurse practitioners working alongside general practitioners are required to see and treat patients with a variety of minor and complex conditions. They therefore need skills in history taking, physical assessment, diagnosing, prescribing and managing long-term conditions. It is assumed that nurses who read this book will have experience in managing the care of babies, children, well young people, people for whom English is not their first language, people with mental health problems and older people with multiple health problems. These case studies are loosely based on interactions that the author has had with patients in Primary Care.

Clinical Examination Skills for Healthcare Professionals Hannah Abbott, Mark Ranson, 2017-05-15 Today an increasing number of healthcare professionals including nurses, midwives and members of many allied professions have to conduct the vital first stage in a patient's journey: taking a clinical history and conducting an effective physical examination. This book offers clear practical guidance on the fundamentals of clinical examination for any practitioner who wishes to understand their patient's specific needs and to plan appropriate care. Recognising that readers will come from a diverse range of clinical backgrounds and roles, the opening chapter on consultation and the skills needed to take an accurate clinical history underpins the systems-based approach. This combined with the use of case study examples allows healthcare professionals to focus on the principles of examining the system or systems that are most relevant to their specific area of practice. The book also includes a helpful glossary and list of abbreviations. This new updated edition contains revised chapters on genitourinary assessment, obstetric assessment and mental health assessment. There is also a completely new chapter on eye, ear, nose and throat assessment covering the EENT conditions most commonly encountered in primary healthcare. Contents include: Consultation and clinical history taking skills, Respiratory assessment, Cardiovascular assessment, Gastrointestinal assessment, Neurological assessment, Genitourinary assessment, Musculoskeletal assessment, Obstetric assessment, Mental health assessment, Perioperative assessment, Eye, ear, nose and throat assessment.

Advanced Clinical Skills for GU Nurses Matthew Grundy-Bowers, Jonathan Davies, 2006-10-02 This book has been developed to help nurses who are in nurse practitioner roles by supporting them to develop their advanced practice skills. This book is intended to build on skills and knowledge that nurses will have acquired at staff nurse level. It is intended that this book will develop skills and knowledge which until recently have been more in the medical domain, such as sexual history taking and physical assessment.

Clinical Diagnosis Philip Jevon, 2011-02-16 The role and function of the nurse is rapidly changing. Some nurses are now required to undertake clinical diagnosis of the patient, a responsibility traditionally undertaken by a doctor. Clinical Diagnosis helps prepare nurses to fulfill this role, providing them with the skills and underpinning knowledge to make clinical diagnoses of patients effectively. Each chapter follows the same layout for each symptom or sign, exploring the definition, causes, history, precipitating factors, associated signs and symptoms, important considerations, relevant clinical examination and investigations and tests. The first UK text to explore clinical diagnosis from a nursing perspective. In the Essential Clinical Skills for Nurses series. Written by
