Mercer, 2012-12-06 This book is a compilation of presentations at the first meeting devoted to the molecular and cellular biology of copper transport When we first considered the possible program for the meeting we felt that a forum to integrate the recent advances in molecular understanding of copper transport with the older knowledge of copper metabolism was needed In addition we wished to have a strong emphasis on the diseases of copper including the genetic diseases Menkes and Wilson and other possible health aspects of this metal seen from a molecular perspective Overall we were very happy with the success of the meeting and most participants were very enthusiastic Unfortunately we were not able to obtain manuscripts from every contributor but the selection in this book covers most of the topics discussed The history of biological research into copper dates from the latter half of the last century when the presence of copper as a component of living systems was first noted but it was not until the 1920s that the essential role of copper was first recognized I S McHargue found that plants and animals needed copper for optimal growth and health and proposed that copper was needed for life McHargue 1925 Other groups soon confirmed these observations in plants In animals the requirement of copper for hematopoiesis was discovered in 1928 Hart et al

**Progress in Iron Research** Chaim Hershko, Abraham M. Konijn, Philip Aisen, 2012-12-06 The 4th International Conference on Hemochromatosis and the 11th International Conference on Iron and Iron Proteins took place in Jerusalem on April 27-30 and on May 2-7 1993 respectively The first a clinical meeting and the second a forum designed primarily for basic scientists Both meetings are held regularly on alternate years and represent probably the most important forum for the exchange of information in iron research The present volume Progress in Iron Research is based on a selection of presentations delivered at these meetings However this volume represents much more than a publication of conference proceedings It offers a comprehensive state of the art review on most aspects of iron metabolism We have tried to offer a balanced review of the most important recent developments in iron research including both basic research and clinical investigation However the scope of chapters was based by definition on the actual participants at the meetings and some important fields in iron research such as plant physiology microbial aspects of iron metabolism and free radical research have not been dealt with Many of the authors of the 40 chapters have been personally responsible for some of the

most important developments in iron research vividly brings into iron physiology and pathophysiology The Editors wish to express their gratitude for the outstanding and timely cooperation of all contributors to this volume **Food and Nutrition Bulletin**, 2008
