Radioactive Geochronometry Heinrich D Holland, Karl K. Turekian, 2010-09-30. The history of Earth in the Solar System has been unraveled using natural radioactivity. The sources of this radioactivity are the original creation of the elements and the subsequent bombardment of objects including Earth in the Solar System by cosmic rays. Both radioactive and radiogenic nuclides are harnessed to arrive at ages of various events and processes on Earth. This collection of chapters from the Treatise on Geochemistry displays the range of radioactive geochronometric studies that have been addressed by researchers in various fields of Earth science. These range from the age of Earth and the Solar System to the dating of the history of Earth that assists us in defining the major events in Earth history. In addition, the use of radioactive geochronometry in describing rates of Earth surface processes, including the climate history recorded in ocean sediments and the patterns of circulation of the fluid Earth, has extended the range of utility of radioactive isotopes as chronometric and tracer tools. Comprehensive interdisciplinary and authoritative content selected by leading subject experts. Robust illustrations, figures and tables. Affordably priced sampling of content from the full Treatise on Geochemistry.

The Tropical Rain Forest Marius Jacobs, 2012-12-06. In recent years, tropical forests have received more attention and have been the subject of greater environmental concern than any other kind of vegetation. There is an increasing public awareness of the importance of these forests, not only as a diminishing source of countless products used by mankind, nor for their effects on soil stabilization and climate, but as unrivalled sources of what today we call biodiversity. Threats to the continued existence of the forests represent threats to tens of thousands of species of organisms, both plants and animals. It is all the more surprising, therefore, that there have been no major scientific accounts published in recent years since the classic handbook by Paul W Richards, *The Tropical Rain Forest* in 1952. Some excellent popular accounts of tropical rain forests have been published, including Paul Richards' *The Life of the Jungle* and Catherine Caulfield's *In the Rainforest and Jungles*, edited by Edward Ayensu. There have been numerous, often conflicting, assessments of the rate of conversion of tropical forests to other uses, and explanations of the underlying causes, and in 1978 UNESCO/UNEPI/FAO published a massive report *The Tropical Rain Forest*, which although full of useful information, is highly selective and does not fully survey the enormous diversity of the forests.
