*Applications of Human Performance*

*Models to System Design* Grant R. McMillan, David Beevis, Eduardo Salas, 2013-06-29 The human factors profession is currently attempting to take a more proactive role in the design of man machine systems than has been characteristic of its past. Realizing that human engineering contributions are needed well before the experimental evaluation of prototypes or operational systems, there is a concerted effort to develop tools that predict how humans will interact with proposed designs. This volume provides an overview of one category of such tools: mathematical models of human performance. It represents a collection of invited papers from a 1988 NATO Workshop. The Workshop was conceived and organized by NATO Research Study Group 9 (RSG 9) on Modelling of Human Operator Behaviour in Weapon Systems. It represented the culmination of over five years of effort and was attended by 139 persons from Europe, Canada, and the United States. RSG 9 was established in 1982 by Panel 8 of the Defence Research Group to accomplish the following objectives: Determine the utility and state of the art of human performance modelling; Encourage international research and the exchange of ideas; Foster the practical application of modelling research; Provide a bridge between the models and approaches adopted by engineers and behavioral scientists; Present the findings in an international symposium.

Biomedical Modeling and Simulation on a PC Rogier P. van Wijk van Brievingh, Dietmar P.F. Möller, Xun Shen, 2013-03-12 I have long had an interest in the life sciences but have had few opportunities to indulge that interest in my professional activities. It has only been through simulation that those opportunities have arisen. Some of my most enjoyable classes were those I taught to students in the life sciences where I attempted to show them the value of simulation to their discipline. That there is such a value cannot be questioned. Whether you are interested in population ecology, pharmacokinetics, the cardiovascular system, or cell interaction, simulation can play a vital role in explaining the underlying processes and in enhancing our understanding of these processes. This book comprises an excellent collection of contributions and clearly demonstrates the value of simulation in the particular areas of physiology and bioengineering. My main frustration when teaching these classes to people with little or no computer background was the lack of suitable simulation software. This directly inspired my own attempts at producing software usable by the computer novice. It is especially nice that software is available that enables readers to experience the examples in this book for themselves. I would like to congratulate and thank the editors, Rogier P. van Wijk van Brievingh and Dietmar P. P. Möller, for all of their excellent efforts. They should be proud of their achievement. This is the sixth volume in the Advances in Simulation series, and other volumes are in preparation.
