Love And Punishment On Developing Learning Intel:

Love And Punishment Paul W. Dixon, 2004 The earlier chapters in the text bring together our basic understanding of how the child acquires their basic mental capacities from early experience As education has become of greater and greater importance in our modern world it is this understanding which is essential for progress into the world of higher education This background is based on standard and well accepted principles of psychology and linguistics This text is therefore highly recommended to all parents who wish to increase the intellectual and school readiness development of their child The children need also to have a means whereby they can overcome those difficulties which so often occur in mathematical instruction It is therefore recommended that a series of exercises both mathematical and dance oriented be started in the child's early years In this way the alleviation of mathematical phobia and anxiety in the United States and in the rest of the world can be solved Those approaching this problem from the mathematical point of view attempt to develop more elaborate mathematical descriptions algorithms and information theories to instruct the student in mathematical skills and understanding Unfortunately this does not attack the problem at the point of origin and what is needed is a means whereby the mental images of the child and adolescent can be developed early in the child's life to create an substratum of these basic mental images schema which underlie mathematical ability Thus we can say that until schools employ the method of instruction as proposed herein and this method is widely disseminated throughout the world mathematical phobias and anxiety will continue to trouble and deter students from normal progress as they go through elementary school middle school high school and into college At each stage the main barrier to progress is the inability to do higher level mathematics Algebra trigonometry analytical geometry calculus and the higher forms of math remain a perpetual mystery and source of confusion to the pupils and students without the underlying preparation as shown in this text

The Philosophy of Education: a lecture Thomas Trevethan SPICER, 1853

Love, Justice, and Education

William H. Schubert, 2010-01-01 Love Justice and Education by William H Schubert brings to life key ideas in the work of

John Dewey and their relevance for the world today He does this by imagining continuation of a highly evocative article that Dewey published in the New York Times in 1933 Dewey wrote from the posture of having visited Utopia Schubert begins each of thirty short chapters with a phrase or sentence from Dewey's article in response to which a continuous flow of Utopians consider what is necessary for educational and social reform among Earthlings Schubert encourages the Utopians who have studied Earthling practices and literatures to recommend from their experience what Earthlings need for educational and social reform and how they can address obstacles to that reform The Utopians speak to myriad implications of Dewey's report by drawing upon a wide range of philosophical literary and educational ideas including many of Dewey's other writings Their central message is that loving relationships and empathic dedication to social justice are necessary for educational reform that responds wholeheartedly to learner needs and interests True to Dewey's original position such education must be built upon social reform that works to overcome acquisitive society based on greed the principal impediment to realizing human potential democratic society and educational relationships that enhance it To overcome the debilitating acquisitiveness that plagues Earth is the challenge for educators and all human beings who seek to involve the young in composing their lives and cultivating a world of integrity beauty justice love and continuously evolving capacities of humanity
