Out of Balance Joel B. Hagen,2021-04-13 Traces historical developments in scientific conceptions of physiology ecology behavior and evolutionary biology during the mid twentieth century Life Out of Balance focuses on a period in history when new ideas of self regulation adaptation and fitness became central to a variety of biological disciplines During the decades surrounding World War II these ideas developed in several quite different contexts and led to greater debates about the merits of such models as applied to larger systems including society at large Particularly in its later cybernetic form homeostasis seemed to provide new ways of discussing balance and regulation that avoided discredited approaches of earlier champions of vitalism and mechanism It provided a common perspective and terminology for discussing self regulating systems whether biological mechanical or social Although enormously fruitful and influential homeostatic perspectives also generated numerous controversies when critics questioned the degree to which biological systems are characterized by balance and self regulation Resolving these controversies continues to be a challenge in modern biology If natural selection constitutes the first law of biology scientists who champion homeostasis as a theoretical model claim that it is a second law equally important and closely related to the first Such claims notwithstanding homeostasis has generated a series of controversies since it was formalized by Walter Cannon in the late 1920s Critics contended that Cannon took a too optimistic view of life not only ignoring pathological deviations from normality but also failing to adequately explain the ability of living things to respond adaptively to environmental challenges Underlying these controversies was the unresolved problem of integrating physiology and other areas of functional biology with the emerging evolutionary synthesis of Mendelian genetics and Darwinian natural selection The physiological idea of homeostasis as the adaptive fit between the organism and its environment and the Darwinian idea of adaptation and fitness in terms of reproductive success might seem to be complementary in an unproblematic way but historically they have had an uneasy relationship

The First Human Ann Gibbons,2007-04-10 In this dynamic account award winning science writer Ann Gibbons chronicles an extraordinary quest to answer the most primal of questions When and where was the dawn of humankind Following four intensely competitive international teams of scientists in a heated race to find the missing link the fossil of the earliest human ancestor Gibbons ventures to Africa where she encounters a fascinating array of fossil hunters Tim White the irreverent Californian who discovered the partial skeleton of a primate that lived 4 4 million years ago in Ethiopia French paleontologist Michel Brunet who uncovers a skull in Chad that could date the beginnings of humankind to seven million years ago and two other groups one led by zoologist Meave Leakey the other by British geologist Martin Pickford and his French paleontologist partner

Science And The Question Of Human Equality Margaret S Collins, Irving W Wainer, Theodore A. Bremner, 2019-06-21 This book provides an interdisciplinary look at racism and science investigating the biological and social realities of individual and group differences The contributors examine race and racial distinctions environmental versus genetic contributions to IQ and to cognitive skill level the impact of biocultural interactions on behavior and the problems of achieving an objective appraisal of inter and intragroup differences in humans They also consider a possible model for cultural and biological evolution recommending a careful selection of models and methods of approach for sciences concerned with the study of man The book includes recent findings in the area of race and IQ documents instances of racism and classism and analyzes factors underlying these phenomena

What We Are: The Evolutionary Roots of Our Future Lonnie Aarssen, 2022-07-05 Other animals are driven to spend essentially their whole lives just trying to get fed stay alive and get laid That s about it The same was true for our proto human ancestors And modern humans of course also require a Survival Drive and a Sex Drive in order to leave descendants But today we spend most of our lives mainly just trying to convince ourselves that our existence is not absurd In What We Are Queen s University biologist Lonnie Aarssen traces how our biocultural evolution has shaped Homo sapiens into the only creature that refuses to be what it is the only creature preoccupied with a deeply ingrained and absurd sentiment I have a distinct mental life an inner self that exists separately and apart from material life and so unlike the latter need not come to an end This delusion conceivably gave our distant ancestors some wishful thinking for finding some measure of relief from the terrifying uniquely human knowledge of the eventual loss of corporeal survival But this came with an impulsive nagging doubt an obsessive underlying uncertainty self impermanence anxiety Biocultural evolution however was not finished It also gave us two additional uniquely human primal drives both serving to help quell the burden of this anxiety Legacy Drive generates delusional cultural domains for extension of self and Leisure Drive generates pleasurable cultural domains for distraction escape from self Legacy Drive and Leisure Drive Aarssen argues represent two of the most profound consequences of human cognitive and cultural evolution What We Are advances propositions regarding how a visceral susceptibility to self impermanence anxiety has paradoxically played a pivotal role in rewarding the reproductive success of our ancestors and has thus been a driving force in shaping fundamental motivations and cultural norms of modern humans More than any other milestone in the evolution of human minds self impermanence anxiety and its mitigating Drives for Legacy and Leisure account for not just the advance of civilization over the past many thousands of years but also now its impending collapse Effective management of this crisis Aarssen insists will require a deeper and more broadly public

understanding of its Darwinian evolutionary roots as laid out in What We Are Wanted, More than Human Intellectual Property Johanna Gibson, 2024-12-27 This book analyses animal creativity in order to unsettle the dominant assumptions that underpin current ideas of authorship and ownership in intellectual property Drawing upon theories of animal behaviour and cognitive ethology the book exposes and disrupts the anthropocentrism that informs prevailing assumptions about creativity intentionality and authorship within the field of intellectual property towards a new theory of authorship and personhood through play and the playful Moving on to challenge the invocation of a more general human nonhuman distinction in this context the book also engages the challenge to this distinction posed by artificial intelligence Incorporating critical animal studies behavioural science ethology critical legal studies and legal philosophy the book presents a new idea of creativity which undermines the kind of rivalrous models now common in the field of intellectual property This book will be of considerable interest to those studying and teaching in the area of intellectual property as well as in animal law It will also appeal to legal theorists and others working in the social sciences in the areas of posthumanism and animal studies

God and the History of the Universe Jarvis Streeter, 2016-03-22 The popular belief that a scientific understanding of reality is incompatible with a Christian one is simply wrong Some Christian understandings of reality do conflict with some scientific understandings But a thoroughly rational Christian understanding of the origin and history of the universe will be informed by the best scientific theories and the facts founded on them This book weaves a narrative of the origin and history of the universe from the perspective of contemporary science with a Christian understanding of God and of God's role in the origin and history of the universe At the center of this integrated narrative is the view that God who is pure unbounded Love is Creator the zest for life in the universe comes from God and God is the source of Truth Beauty and Goodness in the universe God is amazed and delighted at what God and the world has created God is saddened by ways creatures have fallen short of pure unbounded Love Truth Beauty and Goodness and God's pure unbounded Love keeps on trying to persuade all creatures toward Truth Beauty and Goodness

Seminar on Human Biometeorology, 1967 Changing Social Attitudes Toward Disability David Bolt, 2014-07-11 Whilst legislation may have progressed internationally and nationally for disabled people barriers continue to exist of which one of the most pervasive and ingrained is attitudinal Social attitudes are often rooted in a lack of knowledge and are perpetuated through erroneous stereotypes and ultimately these legal and policy changes are ineffectual without a corresponding attitudinal change This unique book provides a much needed multifaceted exploration of changing social attitudes toward disability Adopting a tripartite approach to examining disability the book looks at historical cultural and education studies broadly conceived in order to provide a multidisciplinary and interdisciplinary approach to the documentation and endorsement of changing social attitudes toward disability Written by a selection of established and emerging scholars in the field the book aims to break down some of the unhelpful boundaries between disciplines so that disability is recognised as an issue for all of us across all aspects of society and to encourage readers to recognise disability

in all its forms and within all its contexts This truly multidimensional approach to changing social attitudes will be important reading for students and researchers of disability from education cultural and disability studies and all those interested in the questions and issues surrounding attitudes toward disability An Anthropology of Biomedicine Margaret M. Lock,Vinh-Kim Nguyen,2018-03-20 In this fully revised and updated second edition of An Anthropology of Biomedicine authors Lock and Nguyen introduce biomedicine from an anthropological perspective exploring the entanglement of material bodies with history environment culture and politics Drawing on historical and ethnographic work the book critiques the assumption made by the biological sciences of a universal human body that can be uniformly standardized It focuses on the ways in which the application of biomedical technologies brings about radical changes to societies at large based on socioeconomic inequalities and ethical disputes and develops and integrates the theory that the human body in health and illness is not an ontological given but a moveable malleable entity This second edition includes new chapters on microbiology and the microbiome global health and the self as a socio technical system In addition all chapters have been comprehensively revised to take account of developments from within this fast paced field in the intervening years between publications References and figures have also been updated throughout This highly regarded and award winning textbook Winner of the 2010 Prose Award for Archaeology and Anthropology retains the character and features of the previous edition Its coverage remains broad including discussion of biomedical technologies in practice anthropologies of medicine biology and human experiments infertility and assisted reproduction genomics epigenomics and uncertain futures and molecularizing racial difference ensuring it remains the essential text for students of anthropology medical anthropology as well as public and global health
