

1. Derivation of velocity-time relation

By the definition of acceleration, it is the rate of change of velocity,

$$\text{i.e., } a = \frac{dv}{dt}, \quad \Rightarrow \quad dv = a dt$$

Integrating both sides we get

$$\int dv = a \int dt$$

As acceleration is constant therefore, we take it outside the integral. On velocity we take limit u to v and time from 0 to t

$$\int_u^v dv = a \int_0^t dt$$

$$\Rightarrow \quad v - u = at$$

$$\Rightarrow \quad v - u = at$$

$$\text{or we get } \boxed{v = u + at}$$

2. Derivation of displacement-time relation

Further we know velocity is given by the rate of change of position w.r.t. time

$$v = \frac{dx}{dt}$$

$$\text{We get, } v dt = dx$$

Now in the above equation v is not independent of t . So we replace the value of v by $v = u + at$ and get

$$(u + at)dt = dx$$

Now integrating L.H.S. and R.H.S. from limits 0 to t and x_0 to x respectively, we get

$$u \int_0^t dt + a \int_0^t t dt = \int_{x_0}^x dx$$

$$\Rightarrow \quad ut + \frac{1}{2}at^2 = (x - x_0)$$

$$\text{or } \boxed{x = x_0 + ut + \frac{1}{2}at^2}$$

3. Derivation of velocity-displacement relation

Again we can write

$$a = \frac{dv}{dt} = \frac{dv}{dx} \cdot \frac{dx}{dt} \quad \text{(Dividing and multiplying by } dx)$$

$$\Rightarrow \quad a = v \frac{dv}{dx}, \quad \Rightarrow \quad a dx = v dv$$

Integrating L.H.S. and R.H.S. in limit x_0 to x and u to v respectively we get

$$a \int_{x_0}^x dx = \int_u^v v dv, \quad \Rightarrow \quad a(x - x_0) = \frac{v^2 - u^2}{2}$$

$$\Rightarrow \quad \boxed{v^2 - u^2 = 2a(x - x_0)}$$

where $(x - x_0)$ is the displacement of the object.

Calculus: Concepts and Methods Ken Binmore, Joan Davies, 2002-02-07 The pebbles used in ancient abacuses gave their name to the calculus which today is a fundamental tool in business economics engineering and the sciences This introductory book takes readers gently from single to multivariate calculus and simple differential and difference equations Unusually the book offers a wide range of applications in business and economics as well as more conventional scientific examples Ideas from univariate calculus and linear algebra are covered as needed often from a new perspective They are reinforced in the two dimensional case which is studied in detail before generalisation to higher dimensions Although there are no theorems or formal proofs this is a serious book in which conceptual issues are explained carefully using numerous geometric devices and a wealth of worked examples diagrams and exercises Mathematica has been used to generate many beautiful and accurate full colour illustrations to help students visualise complex mathematical objects This adds to the accessibility of the text which will appeal to a wide audience among students of mathematics economics and science

Direct Methods in the Calculus of Variations Enrico Giusti, 2003 This book provides a comprehensive discussion on the existence and regularity of minima of regular integrals in the calculus of variations and of solutions to elliptic partial differential equations and systems of the second order While direct methods for the existence of solutions are well known and have been widely used in the last century the regularity of the minima was always obtained by means of the Euler equation as a part of the general theory of partial differential equations In this book using the notion of the quasi minimum introduced by Giaquinta and the author the direct methods are extended to the regularity of the minima of functionals in the calculus of variations and of solutions to partial differential equations This unified treatment offers a substantial economy in the assumptions and permits a deeper understanding of the nature of the regularity and singularities of the solutions The book is essentially self contained and requires only a general knowledge of the elements of Lebesgue integration theory Contents Semi Classical Theory Measurable Functions Sobolev Spaces Convexity and Semicontinuity Quasi Convex Functionals Quasi Minima HALder Continuity First Derivatives Partial Regularity Higher Derivatives Readership Graduate students academics and researchers in the field of analysis and differential equations **The American Mathematical Monthly**, 1908
