Abstract

This study provides a detailed analysis of stress errors in English-speaking children's word productions to determine whether the patterns of errors are consistent with the theoretical notions of metrical phonology. Children (aged 22-34 months) produced three-syllable novel and real words which varied according to metrical pattern. Results revealed three general stages in stress acquisition and support for metrical parameters, such as quantity-sensitivity, extrametricality, and main stress. Findings are compared with a recent analysis of stress development in Dutch-speaking children, based on a parametric metrical framework.

Keywords: stress errors, metrical phonology, acquisition, English, Dutch

Introduction

Most linguistic theories make use of a system of principles and parameters, a system of representation, and a system of rules or constraints to account for various aspects of phonological phenomena. Which system one chooses is of utmost importance, because this will influence the interpretation of phonetic facts. The linguistic theory that is the focus of investigation is metrical phonology, a sub-branch of non-linear phonology that deals with stress and rhythm. This theory has been used to describe the stress systems of a wide variety of the world's languages (Hayes, 1981, 1995), but has only been minimally applied to children's speech. There are a number of recent studies, however, which point to the importance of metrical theory in the analysis of children's stress errors (Archibald, 1995; Fikkert, 1994; Hochberg, 1988).

An earlier paper showed that English-speaking children produce greater numbers of stress errors on exceptional stress forms, supporting a systematic pattern of stress acquisition (Kehoe, 1997). This paper provides an in-depth analysis of the same children's stress errors in three-syllable words, to seek further evidence for metrical theory. In particular, it compares findings of the present study with findings from a Dutch study, which documented distinct stages in stress acquisition and support for metrical parameters (Fikkert, 1994). In the first part of this paper I highlight the main features of metrical phonology that will be useful in the analysis of children's
