Michael Faraday, His Life and Work by Silvanus Phillips Thompson Silvanus Phillips Thompson, 1898 **Michael Faraday, 1791-1867** Sydney Gordon, 1969 *Michael Faraday* Silvanus Phillips Thompson, 2017-07-26 Michael Faraday FRS September 22 1791 August 25 1867 was an English scientist who contributed to the study of electromagnetism and electrochemistry. His main discoveries include the principles underlying electromagnetic induction, diamagnetism, and electrolysis. Although Faraday received little formal education, he was one of the most influential scientists in history. It was by his research on the magnetic field around a conductor carrying a direct current that Faraday established the basis for the concept of the electromagnetic field in physics. Faraday also established that magnetism could affect rays of light and that there was an underlying relationship between the two phenomena. He similarly discovered the principles of electromagnetic induction and diamagnetism and the laws of electrolysis. His inventions of electromagnetic rotary devices formed the foundation of electric motor technology, and it was largely due to his efforts that electricity became practical for use in technology. **The Life and Letters of Faraday** Bence Jones, Michael Faraday, 2010-06-24 Michael Faraday 1791-1867 made foundational contributions in the fields of physics and chemistry, notably in relation to electricity. One of the greatest scientists of his day, Faraday held the position of Fullerian Professor of Chemistry at the Royal Institution of Great Britain for over thirty years. Not long after his death, his friend Henry Bence Jones attempted to join together his words and to form them into a picture of his life, which may be almost looked upon as an autobiography. Jones's compilation of Faraday's manuscripts, letters, notebooks, and other writings resulted in this *Life and Letters* (1870), which remains an important resource for learning more about one of the most influential scientific experimentalists of the nineteenth century. Volume 2 (1831-1867) describes his research on electricity and electromagnetism, his work as a scientific adviser to the government and industry, and his service to education.
