New Directions In Memory And Aging Proceedings Of The George A Talland Memorial Conference:

New Directions in Memory and Aging (PLE: Memory) Leonard Poon, James Fozard, Laird Cermak, David Arenberg, Larry Thompson, 2014-05-09 Originally published in 1980 this book contains the proceedings from a memorial conference held in honour of George A Talland who made a significant contribution to the area of memory and aging The major objective of the volume was to stimulate research towards a more comprehensive understanding of age related differences in memory It was also hoped it would provide direction for the application and utilization of research findings in the evaluation and treatment of memory complaints and memory difficulties experienced by the elderly The book was intended for two broad groups of scientists The first being researchers in the psychology of memory and those who were currently active in the research on aging at the time The second group was those concerned with applying current research findings to the diagnosis and treatment of problems of memory

New Directions in Memory and Aging Leonard W. Poon, 1980 Everyday Cognition in Adulthood and Late Life Leonard W. Poon, David C. Rubin, Barbara A.

Wilson, 1992-01-31 The authors present relevant data that open up new directions for those studying cognitive aging

Aging and Cognition E.A. Lovelace, 1990-12-11 Presented in this volume is a discussion of current literature and theoretical issues relating to three aspects of late life age related cognitive change Firstly evidence regarding aging and the basic mental processes of attention motor control memory language problem solving and intelligence are presented Secondly the role of personal traits such as personality and self efficacy in the aging of cognitive function are developed along with self awareness of cognitive processes and age changes in the monitoring of these processes Thirdly consideration is given to the study of interventions to delay or remediate the cognitive declines of aging

The Elderly Eyewitness in Court Michael P. Toglia, David F. Ross, Joanna Pozzulo, Emily Pica, 2014-02-18 The majority of research on eyewitness memory has traditionally studied children and young adults By contrast this volume is designed to provide an overview of empirical research on the cognitive social and health related factors that impact the accuracy of eyewitness testimony given by the elderly The book takes a lifespan developmental perspective that incorporates research on witnesses of all ages but uses the findings to focus on issues unique to the elderly This includes research on recognition memory with lineup identifications and recall memory that occurs when an elderly witness is asked to describe an event in court The Elderly Eyewitness also examines jurors reactions to the testimony of an elderly witness and the legal and social policy issues that emerge when the elderly witness participate in legal proceedings While reviewing what is known about the elderly witness the book also provides a direction for future research into this new frontier of scientific inquiry Its audience spans researchers in cognitive and developmental psychology and professionals working in the growing area of psychology and law

Annual Review of Gerontology and Geriatrics, Volume 7, 1987 K. Warner Schaie, PhD, 1987-11-15 This volume of the ARGG is devoted to the behavioral sciences with particular attention given to topics in experimental and applied psychology With the rapid rate of research in

this field of aging the contributors address a number of important basic and applied topics that are underrepresented in other literature *Aging and Cognition* T.M. Hess,1990-10-09 During the past two decades there has been a dramatic increase in interest in the study of aging related changes in cognitive abilities In this volume researchers from a variety of theoretical perspectives discuss adult age differences in a wide range of cognitive skills Of special interest is the extent to which aging effects on performance are related to variations in the representation organization and utilization of knowledge broadly defined Recent research and theory in the field of aging has emphasized the need to examine such processes more closely in order to provide a more complete understanding of aging effects on cognitive behavior Compensating for Psychological Deficits and Declines Roger A. Dixon,Lars B.,ckman,Lars Backman,2013-06-17 The concept of compensation in psychology refers to processes through which a gap or mismatch between current accessible skills and environmental demands is reduced or closed These gaps can be principally the result of losses such as those associated with aging or interpersonal role changes injuries such as those that may occur to the neurological or sensory systems organic or functional diseases such as the dementias or schizophrenia and congenital deficits such as those apparent in autism or some learning disabilities Whether the demand skill gaps can be bridged completely reduced only moderately or are impossible to close depends on a variety of factors In every case however the guiding notions of compensation are that some such deficits may be amendable the continuation of the effects of the gap may be avoidable and some functioning may be recoverable In this sense compensation is related to adaptation it is about overcoming deficits managing the effects of losses and promoting improvement in psychological functioning Compensation is a concept that has a long and rich history in numerous domains of psychological research and practice To date however few of the relevant research domains have benefitted explicitly or optimally from considering alternative perspectives on the concept of compensation Although researchers and practitioners in several areas of psychology have actively pursued programs with compensation as a central concept communication across disciplinary divides has been lacking Comparing and contrasting the uses and implications of the concept across neighboring and even not so adjacent areas of psychology can promote advances in both theoretical and practical pursuits The goal of this book is to carry inchoate integrative efforts to a new level of clarity To this end the editors have recruited major authors from selected principal areas of research and practice in psychological compensation The authors review the current state of compensation scholarship in their domains of specialization State of the art reviews of this rapidly expanding area of scholarship are therefore collected under one cover for the first time In this way a wide variety of readers who might otherwise rarely cross professional paths with one another can quickly learn about alternative preferences agendas and methods as well as novel research results interpretations and practical applications Designed to contain broad deep and current perspectives on compensation this volume continues the processes of explicating the concept of compensation linking and distinguishing compensation from neighboring concepts describing the variety of compensatory mechanisms operating in

a wide range of phenomena and illustrating how compensatory mechanisms can be harnessed or trained to manage losses or deficits and to promote gains or at least maintenance of functioning *Maintaining Safe Mobility in an Aging Society* David W. Eby, Lisa J. Molnar, Paula S. Kartje, 2008-12-22 By 2030 20 percent of the world's drivers 60 million in all will be over the age of 65 Consequently safe and efficient mobility for older adults is a complex and pressing issue *Maintaining Safe Mobility in an Aging Society* addresses the complexities surrounding the booming number of aging drivers and practical solutions for sustaining safe travel **Aging** Shamim I. Ahmad, 2017-10-30 This book is a detailed and comprehensive synthesis of the scientific study of aging Dozens of contributions from leading scholars review various theories of aging and molecular cellular biochemical and microbial aspects of aging among just a few of the topics included Authoritative wide ranging and thorough this book will act as a source for experimental design a comprehensive description of age related diseases and provide information of the latest molecular theories underlying their causes Additionally it will target industries involved in developing anti aging drugs post graduate medical students and university libraries
