New Horizon Testing David J. Weiss, 2014-06-28 **New Horizon Testing** **Computerized Adaptive Testing: Theory and Practice** Wim J. van der Linden, Cees A.W. Glas, 2005-12-30 Modern computer technology has opened up several new possibilities for optimizing the administration of educational and psychological tests In computer adaptive testing CAT tests are automatically tailored to the proficiency level of the individual examinees Currently nearly all large scale testing programs in the western world are already adaptive or in the process of becoming so Written by active CAT researchers from Europe and North America the chapters offer a comprehensive introduction to the latest developments in the theory and practice of CAT The book can be used both as a basic reference on the state of the art in CAT and a valuable resource in graduate courses on test theory The theoretical chapters in this book cover such topics as item selection and ability estimation item pool development and maintenance item calibration and model fit and testlet based adaptive testing The practical chapters describe the operational aspects of existing large scale CAT programs *Computerized Adaptive Testing* Howard Wainer, Neil J. Dorans, Ronald Flaugher, Bert F. Green, Robert J. Mislevy, 2000-04-01 This celebrated primer presents an introduction to all of the key ingredients in understanding computerized adaptive testing technology test development statistics and mental test theory Based on years of research this accessible book educates the novice and serves as a compendium of state of the art information for professionals interested in computerized testing in the areas of education psychology and other related social sciences A hypothetical test taken as a prelude to employment is used as a common example throughout to highlight this book's most important features and problems Changes in the new edition include a completely rewritten chapter 2 on the system considerations needed for modern computerized adaptive testing a revised chapter 4 to include the latest in methodology surrounding online calibration and in the modeling of testlets and a new chapter 10 with helpful information on how test items are really selected usage patterns how usage patterns influence the number of new items required and tools for managing item pools **Computerized Adaptive Testing** David J. Weiss, Alper Sahin, 2024-06-03 CAT is the use of artificial intelligence and machine learning to create a test unique to each person in real time CAT From Concept to Implementation is designed to take you from your initial decision to implement a CAT through each step in the process of fielding a CAT that will provide its benefits both to your examinees and to your organization It describes how CATs are developed and how they are implemented using current advanced psychometric methods

Self-directed Learning Oriented Assessments in the Asia-Pacific Magdalena Mo Ching Mok, 2012-10-08 The Asia Pacific region needs to maximize the benefits of education to enable it to compete in an economic future dominated by innovation in which assessing student progress must be an empowering rather than delimiting factor This detailed exposition of the theoretical basis and application tools of self directed learning oriented assessment SLOA reflects the very latest research championed by the Assessment Research Centre at The Hong Kong Institute of Education Featuring a range of

relevant case studies it explores the varied theoretical issues related to SLOA and offers an integrated view of the system fully in line with the constructivist paradigm of learning which advocates formative rather than summative assessment Many of the initiatives outlined here are firsts in the region SLOA is already being applied in many schools with links to the ARC It is an approach to assessment that acknowledges the centrality of self directed learning and which positions assessment as a tool to enable and enhance self directed learning It draws on several theories of learning and assessment including the constructivist notion that learning is best achieved when students take ownership of their educational process setting their own goals and monitoring their own progress towards those goals SLOA has been the research and service approach of the ARC since 2005 In the intervening years the centre has developed a number of tools to facilitate SLOA learning and assessment including vertical ability scales teacher friendly computer software and packages for self directed learning

Computer-Based Instruction in Military Environments Robert J. Seidel,P.D. Weddle,2012-12-06 This collection of papers is the result of a symposium sponsored by NATO s Defense Research Group Panel VIII in the Spring of 1985 The symposium came into being when it became obvious to the NATO countries that research development and utilization of advanced technologies for training was the best means of increasing both training effectiveness and efficiency This symposium was the second in a series of three devoted to training The series was structured to cover all aspects of training The first series addressed the value of training the second one dealt with the application of training technologies and the third and last of the series focused on academic issues concerned with the effect of prior learning on subsequent learning The fact that a major American publisher has determined that computer based instruction is the technology of greatest interest to the NATO community is not surprising Advances in microprocessor technology have revolutionized both how and where we train During this symposium there were a limited number of carefully chosen exhibits to demonstrate the various applications of computer based training techniques In the following papers you will find both a practical and scientific basis for the way current and future training and training systems should be designed applied and utilized We know that training must be done faster and more effectively

The Theory and Practice of Item Response Theory R. J. de Ayala,2022-02-20 Noted for addressing both the hows and whys of item response theory IRT this text has been revised and updated with the latest techniques multilevel models mixed models and more and software packages Simple to more complex models are covered in consistently formatted chapters that build sequentially The book takes the reader from model development through the fit analysis and interpretation phases that would be performed in practice To facilitate understanding common data sets are used across chapters with the examples worked through for increasingly complex models Exemplary model applications include free BIGSTEPS NOHARM Facets R packages and commercial BILOG MG flexMIRT SAS WINMIRA SPSS SYSTAT software packages The companion website provides data files and online only appendices New to This Edition Chapter on multilevel models New material on loglinear models mixed models the linear logistic trait model and fit statistics Many additional

worked through examples Updated guidance on software now includes R SAS and flexMIRT *Elements of Adaptive Testing* Wim J. van der Linden, Cees A.W. Glas, 2010-03-10 The arrival of the computer in educational and psychological testing has led to the current popularity of adaptive testing a testing format in which the computer uses statistical information about the test items to automatically adapt their selection to a real time update of the test taker s ability estimate This book covers such key features of adaptive testing as item selection and ability estimation adaptive testing with multidimensional abilities sequencing adaptive test batteries multistage adaptive testing item pool design and maintenance estimation of item and item family parameters item and person fit as well as adaptive mastery and classification testing It also shows how these features are used in the daily operations of several large scale adaptive testing programs **Handbook of Item Response Theory** Wim J. van der Linden, 2016-10-14 Drawing on the work of internationally acclaimed experts in the field Handbook of Item Response Theory Volume One Models presents all major item response models This first volume in a three volume set covers many model developments that have occurred in item response theory IRT during the last 20 years It describes models for different response formats or response processes the need of deeper parameterization due to a multilevel or hierarchical structure of the response data and other extensions and insights In Volume One all chapters have a common format with each chapter focusing on one family of models or modeling approach An introductory section in every chapter includes some history of the model and a motivation of its relevance Subsequent sections present the model more formally treat the estimation of its parameters show how to evaluate its fit to empirical data illustrate the use of the model through an empirical example and discuss further applications and remaining research issues **The Wiley Handbook of Psychometric Testing** Paul Irwing, Tom Booth, David J. Hughes, 2018-02-12 A must have resource for researchers practitioners and advanced students interested or involved in psychometric testing Over the past hundred years psychometric testing has proved to be a valuable tool for measuring personality mental ability attitudes and much more The word psychometrics can be translated as mental measurement however the implication that psychometrics as a field is confined to psychology is highly misleading Scientists and practitioners from virtually every conceivable discipline now use and analyze data collected from questionnaires scales and tests developed from psychometric principles and the field is vibrant with new and useful methods and approaches This handbook brings together contributions from leading psychometricians in a diverse array of fields around the globe Each provides accessible and practical information about their specialist area in a three step format covering historical and standard approaches innovative issues and techniques and practical guidance on how to apply the methods discussed Throughout real world examples help to illustrate and clarify key aspects of the topics covered The aim is to fill a gap for information about psychometric testing that is neither too basic nor too technical and specialized and will enable researchers practitioners and graduate students to expand their knowledge and skills in the area Provides comprehensive coverage of the field of psychometric testing from designing a test through writing

items to constructing and evaluating scales Takes a practical approach addressing real issues faced by practitioners and researchers Provides basic and accessible mathematical and statistical foundations of all psychometric techniques discussed Provides example software code to help readers implement the analyses discussed
