Performance and Accountability Report National Science Foundation (U.S.),2004 The Journal of Experimental Biology ,2007 Resources in Education ,1978 **List of Journals Indexed in Index Medicus** National Library of Medicine (U.S.),1996 Issues for 1977 1979 include also Special List journals being indexed in cooperation with other institutions Citations from these journals appear in other MEDLARS bibliographies and in MEDLING but not in Index medicus Evolutionary Developmental Biology ,2021-02-16 Evolutionary Developmental Biology Volume 141 focuses on recent research in evolutionary developmental biology the science studying how changes in development cause the variations that natural selection operate on Several new hypotheses and models are presented in this volume and these concern how homology may be properly delineated how neural crest and placode cells emerged and how they formed the skull and jaw and how plasticity and developmental symbiosis enable normal development to be regulated by environmental factors New models for homology New hypotheses for the generation of chordates New models for the roles of plasticity and symbionts in normal development Physiological Diversity John Spicer,Kevin Gaston,2009-04-01 Ecologists have always believed at least to a certain extent that physiological mechanisms serve to underpin ecological patterns However their importance has traditionally been at best underestimated and at worst ignored with physiological variation being dismissed as either an irrelevance or as random noise error Spicer and Gaston make a convincing argument that the precise physiology does matter In contrast to previous works which have attempted to integrate ecology and physiology Physiological Diversity adopts a completely different and more controversial approach in tackling the physiology first before moving on to consider the implications for ecology This is timely given the recent and considerable interest in the mechanisms underlying ecological patterns Indeed many of these mechanisms are physiological This textbook provides a contemporary summary of physiological diversity as it occurs at different hierarchical levels individual population species etc and the implications of such diversity for ecology and by implication evolution It reviews what is known of physiological diversity and in doing so exposes the reader to all the key works in the field It also portrays many of these studies in a completely new light thereby serving as an agenda for and impetus to the future study of physiological variation Physiological Diversity will be of relevance to senior undergraduates postgraduates and professional researchers in the fields of ecology ecological physiology ecotoxicology environmental biology and conservation The book spans both terrestrial and marine systems *Individuals as Producers of Their Development* Richard M Lerner,Nancy A. Busch-Rossnagel,2013-09-03 Individuals as Producers of Their Development A Life Span Perspective provides an assessment of the usefulness of viewing the individual as an active contributor to his or her development It extends the breadth of organism environment reciprocities beyond those involved with the child and family On the one hand this extension involves a consideration of the role of evolutionary biological processes on the other it pertains to the broader ecology of human development the social network lying outside the family

and the physical environmental contexts of development Person context reciprocities linked to variables that may play their greatest role in the extrafamilial context are also considered Variables such as physical attractiveness race and physical handicap are examples of those discussed in this regard Finally because of the greater scope of the analysis a potentially greater data base is examined in a search for documentation of the presence and role of dynamic person context interactions
