

VARIED THRUSH

Varied Thrush is closely associated with the damp, shaded coniferous forests of the Pacific Northwest. Often found in flocks in winter, it is similar in habits to American Robin but more sociable.

Typical Thrushes

Robins are large, boldly colored thrushes; they are often found in flocks on grassy lawns, etc., or seen in high flight. Species in the spotted thrushes group are medium-size and brown with spotted breasts; they are found singly within shaded woods. Spotted thrushes are identified by face and breast pattern and flank and overall color. Adult or 1st year females are shown.
