New Horizons In Platelet Activating Factor Research:

New Horizons in Platelet Activating Factor Research C. M. Winslow, Mark L. Lee, 1987 Platelet Activating Factor PAF is a naturally occurring substance with potent biological effects which have a broad significant role in the activation of various inflammatory cells. It therefore contributes to a number of serious clinical conditions including anaphylaxis, allergic and inflammatory diseases, e.g. asthma, rhinitis, thrombosis. This book brings together leading investigators in the field to present their latest research directed towards the biosynthesis of PAF, its cellular origins, PAF-induced cellular and tissue responses, pathophysiological responses, and most important, to finding effective antagonistic drugs to control this inflammatory mediator. *Platelet-Activating Factor and Related Lipid Mediators* F. Snyder, 2013-11-11 Platelet activating factor PAF is the commonly used name for a group of potent biologically active ether-linked phospholipids, the alkylacetyl-glycerophosphocholines. Following the identification of the chemical structure of PAF in 1979, much progress has been made in our understanding of these phospholipid mediators. This is particularly true from the points of view of their molecular structural requirements for expression of biological activity, their biosynthesis and catabolism, their diverse range of biological activities, evidence for their specific receptors at the cell surface, the development of specific antagonists for use in receptor studies, and for testing as potential anti-PAF drugs, and implications about their involvement in health and disease. Chapters in this book cover the current status of these general areas of PAF research. Although an enormous amount of information has been published about this interesting new type of phospholipid mediators, questions about their mechanism of action, regulatory controls, and the precise role and relative importance of PAF in specific diseases and physiological functions remain to be answered. Since the 1979 discovery, the PAF field has brought together scientists from a variety of different biomedical disciplines. The diversity of scientists now in PAF research is very apparent from the number of PAF publications appearing in a wide array of scientific journals, ranging from molecular biology to clinical medicine. Publications related to PAF continue to increase at an amazingly rapid rate, with the pace reminiscent of the period following the discovery of prostaglandins. **Handbook of PAF and PAF Antagonists** Pierre Braquet, 2019-06-13 Published in 1991, since its characterization in the 1970s, from antigen-stimulated rabbit basophils, platelet activating factor (PAF) has been demonstrated to be produced by and act upon a variety of cell types. PAF antagonists, which have been obtained from both natural sources and chemical synthesis, now represent a new class of therapeutic agents and may provide new prospects for treating several major pathologies, particularly shock, ischemia, and asthma. This book provides a unique overview of the chemistry, molecular modeling, pharmacology, and clinical potential of the major classes of natural and synthetic PAF antagonists. Compounds reviewed include the ginkgolides, diketopiperazines, neolignans, hexazepines, cyclic and 1,3-dioxolan-derived PAF analogs, pyrrolo-1,2-c-thiazoles, imidazo-2,1-a-isoquinolines, and pyridoquinazoline carboxamides. Consisting of 12 chapters written by leading experts in PAF antagonist research, this book is essential reading for students, researchers,

clinicians and medical practitioners involved in this rapidly developing field of biomedical research **Molecular Mechanisms of Neuronal Responsiveness** Yigal H. Ehrlich, Robert H. Lenox, Elizabeth Kornecki, William O. Berry, 2013-03-13

The interaction of neurotransmitters neuromodulators and neuroactive drugs with receptors localized at the cell surface initiates a chain of molecular events leading to integrated neuronal responses to the triggering stimuli Major advancements in the characterization and isolation of receptor molecules have answered many questions regarding the nature of the elements that determine the specificity in these interactions At the same time recent studies have provided evidence that delicate regulation by intracellular enzymatic systems determines the efficiency of the stimulus response coupling process mediates the interaction between receptors operates in feedback control mechanisms and transduces signals from the receptors to various effector sites in a highly coordinated fashion These studies are at the focus of the present volume which is an outcome of a symposium held at the University of Vermont College of Medicine on March 21-23 1986 in conjunction with the seventeenth annual meeting of the American Society for Neurochemistry The symposium has demonstrated clearly that the concerted efforts of investigators in neurophysiology biochemistry pharmacology cell biology molecular genetics neurology and psychiatry are required to achieve better understanding of the processes underlying neuronal responsiveness This volume includes contributions provided by prominent investigators in all these research areas We hope that the readers will find here a useful source of information and ideas for stimulating further studies which may serve to narrow the gap between basic neuroscience research and its clinical implications **Aliphatic Compounds** Malcolm Sainsbury, 2016-06-24

Rodds Chemistry of Carbon Compounds Volume I Aliphatic Compounds focuses on the chemistry of polyhydric alcohols and saccharides The chemistry of polyhydric alcohols is a vast and crucially important area not only because of the prominent roles that polyols have in their own right but because of the way they and their modified forms are incorporated into natural products The topics covered include the analogues derivatives and oxidation products of trihydric and tetrahydric alcohols phospholipids polyhydric alcohols and their oxidation products synthesis chemistry structure and physical properties and use in the synthesis as chiral templates and asymmetric synthesis of natural products of monosaccharides and disaccharides and oligosaccharides This text also discusses the applications of carbohydrates as chiral auxiliaries templates and starting materials in syntheses This volume is a useful reference for students and organic chemists **Principles of Cell Adhesion (1995)** Peter D. Richardson, Manfred Steiner, 2017-11-22

Intended for cell biologists biophysicists biochemists molecular biologists physiologists researchers in hemostasis and thrombosis and pathologists this book provides an insight into cell adhesion from three interdisciplinary perspectives fundamental facts of adhesion molecular biochemistry of adhesion and physiological aspects It summarizes the basic aspects of surfaces in general and describes the theoretical and experimental tools necessary to investigate cell adhesion including the basic biochemistry and molecular biology of adhesion The book offers concise treatment of individual topics features current material and provides key references as a guide to further study

Arachidonate Metabolism in Immunologic Systems L. Levine, 1988 **Inflammation** Robert R. Ruffolo, Jr., Manfred A. Hollinger, 1995-06-21 Inflammation Mediators and Pathways reviews key developments in the field of inflammation. It focuses on novel pathways of inflammation that have only recently surfaced. All the topics covered are currently the subject of intense investigation and all contributors are established investigators in the field. *Handbook of Mucosal Immunology*, 2012-12-02 Researchers have recently made tremendous progress in the area of mucosal immunology, greatly increasing our understanding of the common mucosal immune system, mucosal infections, and oral immunization. However, this research has not previously been made available in a single work. In its large 812x11 format, *Handbook of Mucosal Immunology* covers the entire spectrum of mucosal immunity and is organized in two main sections to present the basic biology of the common mucosal immune system and the immune responses of the mucosae. The first section provides an introduction and historical perspective of the mucosal immune system and includes comprehensive discussion of the development and physiology of mucosal defense. It discusses such topics as the structure and function of the mucosal epithelium, characteristics of mucosal-associated lymphoid tissue (MALT), Peyer's patches, and concepts of mucosal vaccines. The second section focuses on the secretory immune system with special reference to mucosal diseases in the digestive, GALT, respiratory, BALT, and genitourinary tracts. This information is especially important in light of the current interest in the mechanisms of transmission and prevention of infectious diseases such as AIDS, hepatitis, and tuberculosis. Virtually all chapters have been authored by the original investigators responsible for key observations on which current concepts are based. This handbook will be an invaluable resource for a diverse group of both researchers and practicing clinicians. Molecular biologists, immunologists, veterinarians, public health workers, physicians in specialties from pediatrics to pulmonology, and graduate students of mucosal immunology will all find this handbook the most complete work on the subject. **The Progressive Fish Culturist** U.S. Fish and Wildlife Service, 1997
