Pediatric Orthopedics in Practice Fritz Hefti, 2007-05-02 that is pushing the crooked tree trunk in the cover il Children are patients not customers lustration This requires close cooperation with parents they require care not management pediatricians other therapists orthopaedic technicians G A Annas and nursing personnel The idea for this book originated from pediatricians who were frequently encountering patients with musculoskeletal problems and who during a course in pediatric orthopaedics expressed a wish for a book that would take

into account the standpoint of the pediatrician as well as those of the children and parents It has since grown into a comprehensive volume Not all readers will have so much to do with crooked children that they will want to read everything But perhaps they might wish to refer to this book upon encountering a specific problem There may also be those who are not directly involved in treatment but who would probably like to know the various available options and the corresponding factors considered in their selection For practical purposes this book also aims to stress the regional rather than a systematic subdivision of disorders After all a child does not come to the doctor's office saying I'm suffering from a growth disorder or I have a congenital condition Rather he or she will say my back hurts or I have a stabbing pain in my knee
