A commentary on

Non-biased enrichment does not improve quantitative proteomic delineation of reovirus T3D-infected HeLa cell protein alterations

by Jiang, J., Opanubi, K. J., and Coombs, K. M. (2012). *Front. Microbio.* 3:510. doi: 10.3389/fmicb.2012.00059

In this special Frontiers in Microbiology issue focusing on "Global host proteomic responses to virus infection," Coombs and colleagues (Jiang et al., 2012) make a valiant effort to look deeper into (changes in) the proteome of HeLa cells upon reovirus infection. Using some of the latest proteomic techniques, they present a high quality analysis of quantified alterations in the protein content of HeLa cells with, or without, infection by reovirus T3D. The study of the relatively harmless mammalian reoviruses received a boost from their potential to selectively kill certain types of cancer cells (Coffey et al., 1998). Proteomic studies, comparing all proteins and their post translational modifications in a quantitative fashion between control and reovirus infected cells therefore became crucial. However, all proteomic studies are hampered by the large differences in natural protein concentrations. In mass spectrometric (ms) practice, the most conspicuous protein restricts the level of detection to proteins that are, at most, about a thousand fold less abundant. Methods used to overcome this limitation either purge the most abundant, or specifically purify the less abundant proteins. Of course such biased approaches have rather big drawbacks themselves, related to the method of purging and the choice of purification procedure. "Unbiased" approaches, leveling the playing field without prior loss of possibly interesting proteins or enrichment based

on known interactions, come in two flavors. One of them is based on the use of antibodies against "every" protein made by a certain organism as illustrated by human tissue profiling (Uhlen and Ponten, 2005). This is a non-ms technique, although immune precipitations can be combined with further ms analysis. The technique would indeed allow sensitive detection of very low abundant proteins, but relies on getting an effective epitope for every gene product and is rather costly. It also has to focus on the most common protein forms and will be difficult to use for the detection of less abundant forms, let alone post translational modifications.

The only really unbiased approach available seems to be the use of hexapeptide combinatorial ligand libraries to enrich for all low abundant proteins (Boschetti and Rigbetti, 2008). The basic idea is simple and rather elegant: generate "random" peptide libraries, coat individual beads with single peptide forms, and allow your protein sample to interact with complex beads mixtures. Highly abundant proteins will saturate the beads they interact with quickly, and the large unbound majority will be washed away. However, proteins that are much less abundant will also find peptide targets to their liking and be retained. To give a somewhat more precise description: the abundance advantage of certain proteins (differences in mol L⁻¹) has to be more than compensated for by differing binding affinities (again in mol L⁻¹). Prior work showed hexapeptide libraries (with a combinatorial complexity of 6.4×10^7 peptides) to be optimal in this respect. Of course, not all amino acids in the hexamers contribute to the (strength of) interaction with proteins in the sample equally, three hydrophobic ones (Phe, Trp, and Tyr) and the three basic ones (Arg, His, and Lys) presumably being the most important. This (ProteoMiner) technique

is the one that Jiang et al. decided to use. However, in their abstract it is concluded that: "Comparisons of the r^2 correlations, degree of dataset overlap, and numbers of peptides detected suggest that non-biased enrichment approaches may not provide additional data to allow deeper quantitative and comparative mining of complex proteomes." It is refreshing that these authors highlight what could be seen as a "negative" finding. In presenting evidence suggesting that in this case non-biased enrichment strategies do not seem to allow us to deliver much deeper into the proteome, the authors give us the latest installment in an ongoing saga regarding the effectivity of using a ProteoMiner approach to get a peek at low abundant proteins in an unbiased fashion. The approach has already been used extensively in one of the most important, but at the same time most challenging, areas of clinical research: biomarker discovery in serum (which has tremendous differences in protein abundancies at $\sim 10^{10}$ differences in concentration). Discussions regarding the effectivity of using hexamers seems to have been resolved in favor of the approach, although peptide elution had to be performed at three separate pH values to get full peptide diversity (Bandow, 2010; Di Girolamo et al., 2011). In regards to cellular extracts, an extreme example of protein "imbalance" is found in erythrocytes with 98% hemoglobin. The 2% that remains was much more easily explored upon the use of two different hexamer peptide sets (Roux-Dalvai et al., 2008). Even more striking are the results obtained by Yates and colleagues using "normal" HeLa cells: they obtain improvements in silverstained 2D gels as well as statistically significant differences in proteome sets using ms analysis of fractions with or without prior ProteoMiner beads incubation (Forslow et al., 2011).

Muramoto, 2003-09-02 Buddhism first came to the West many centuries ago through the Greeks, who also influenced some of the culture and practices of Indian Buddhism. As Buddhism has spread beyond India, it has always been affected by the indigenous traditions of its new homes. When Buddhism appeared in America and Europe in the 1950s and 1960s, it encountered contemporary psychology and psychotherapy rather than religious traditions. Since the 1990s, many efforts have been made by Westerners to analyze and integrate the similarities and differences between Buddhism and its therapeutic ancestors, particularly Jungian psychology. Taking Japanese Zen Buddhism as its starting point, this volume is a collection of critiques, commentaries and histories about a particular meeting of Buddhism and psychology. It is based on the Zen Buddhism and Psychotherapy conference that took place in Kyoto, Japan, in 1999, expanded by additional papers and includes new perspectives on Buddhism and psychology. East and West cautions and insights about potential confusions, traditional ideas in a new light. It also features a new translation of the conversation between Shin'ichi Hisamatsu and Carl Jung, which took place in 1958. *Awakening and Insight* expresses a meeting of minds, Japanese and Western, in a way that opens new questions about and sheds new light on our subjective lives. It will be of great interest to students, scholars and practitioners of psychotherapy, psychoanalysis and analytical psychology, as well as anyone involved in Zen Buddhism. **Sociological**

Insights of Great Thinkers Christofer R. Edling, Jens Rydgren, 2010-11-18 In this book, leading sociologists expand the scope of their discipline by revealing the sociological aspects of the works of great philosophers, scientists and writers. Sociologists have long recognized that sociological insight can be gleaned from creative thinkers outside their formal discipline. *Sociological Insights of Great Thinkers: Sociology through Literature, Philosophy and Science* captures and examines those insights in 32 essays that discuss scholars and writers not normally associated with any sociological school of thought. Following a tradition of enriching the sociological toolkit by finding influence in philosophy and literature, the volume's contributors, an international group of renowned scholars, eschew biography to focus solely on sociological interpretations that can be drawn from the work of many of history's preeminent thinkers. Among the book's subjects are philosophers such as Aristotle, Plato, Kant and Cassirer; scientists such as Darwin and Galileo; and authors such as Kafka, Proust and Shakespeare. The essays not only allow readers to see such thinkers in a new light but underscore the fact that sociological questions have lain at the very heart of humanity throughout history. **Concise Encyclopedia of Professional Services Marketing**

State Capture in the Militarized Fight Against Illegal Small-Scale Goldmining in Ghana Jasper Abembia Ayelazuno, Maxwell Akansina Aziabah, 2025-05-22 This slim book addresses one of the most vexed questions about governance and politics in natural resources rich albeit poor countries across the world Why have most states in natural resources rich developing countries failed to regulate their artisanal and small scale mining ASM industries This failure is both intellectually and politically puzzling because these same states demonstrate capability in different functions and regulations of other sectors of the economy Ghana is a quintessential example of this puzzle Despite its legendary reputation as a relatively well governed peaceful and democratic country its ASGM sector is characterized predominantly by informality criminality and horrendous environmental and human development effects which include the ferocious denuding of the country's vegetation cover toxic pollution of water bodies and serious health and safety hazards inflicted on the rural populace in mining areas This book seeks to contribute a fresh state theoretical perspective state capture to unravel this puzzle It argues that the chaotic criminal and ruinous Ghanaian ASGM sector known in Ghanaian parlance as the *galamsey* menace is caused by state capture The Ghanaian state has been captured by the mining power elites something that allows them to undertake criminal and destructive mining with impunity These state captors are not doing artisanal and small scale mining ASM but rather capitalist mechanized mining CMM which ravages the environment on a large scale and with breakneck speed State capture in Ghana's ASGM sector is demonstrated clearly in the book through vivid description and rigorous analysis of the failed militarised fight against the *galamsey* menace between 2017 and 2022 This is the period the Head of State and Commander in Chief of the Ghana Armed Forces GAF vowed to fight and defeat the perpetrators of this crime at the risk of losing his presidency He then declared war on the perpetrators and commandeered the coercive apparatuses of state led by the GAF to fight it The book argues that the state failed spectacularly to win this war the evidence of which is the aggravation of the deleterious environmental and human effects of *galamsey* For example the rivers and water bodies of Ghana have witnessed unprecedented levels of poisoning with lethal chemicals The rural populace in mining communities is inflicted with serious maternal and neonatal health hazards such as hideous congenital and physical disorders of some babies born in these communities and sadly the deaths of these babies Why despite its overwhelming coercive capacity did the Ghanaian state fail to win a war against a weak enemy *galamsey* operators who are mostly unarmed civilians

and operating in plain sight of state agencies Using the lens of state captured this book addressed this question offering fascinating and penetrating insights into the puzzle Being the first to do this the book contributes to advancing theory methods and political praxis in the study and governance of the ASM industry in Ghana As failed military crackdowns on illegal ASM are common across natural resources rich developing countries the contribution this book makes may be germane to these countries in say Latin America and Asia

The Origins of War Matthew A. Shadle, 2011-03-10 Debate rages within the Catholic Church about the ethics of war and peace but the simple question of why wars begin is too often neglected Catholics assumptions about the causes of conflict are almost always drawn uncritically from international relations theory a field dominated by liberalism realism and Marxism which is not always consistent with Catholic theology In *The Origins of War* Matthew A Shadle examines several sources to better understand why war happens His retrieval of biblical literature and the teachings of figures from church tradition sets the course for the book Shadle then explores the growing awareness of historical consciousness within the Catholic tradition the way beliefs and actions are shaped by time place and culture He examines the work of contemporary Catholic thinkers like Pope John Paul II Jacques Maritain John Courtney Murray Dorothy Day Brian Hehir and George Weigel In the constructive part of the book Shadle analyzes the movement within international relations theory known as constructivism which proposes that war is largely governed by a set of socially constructed and cultural influences Constructivism Shadle claims presents a way of interpreting international politics that is highly amenable to a Catholic worldview and can provide a new direction for the Christian vocation of peacemaking

Transforming McLuhan Paul Grosswiler, 2010 *Transforming McLuhan* explores the radical humanist line of descent in interpreting Canadian media and culture theorist Marshall McLuhan s work rejecting the dominant view of McLuhan as a conservative uncritical herald of technological determinism and capitalism This McLuhan is the oppositional critic of modernity resisting uncontrolled technological change who seeks new media forms with a human face Contributors from diverse international and academic perspectives include Douglas Kellner Nick Stevenson Gary Genosko Richard Cavell Lance Strate Glenn Willmott Patrick Brantlinger Donna Flayhan and Bob Hanke Marshall McLuhan was the first to theorize and to develop a concept of media indicating their importance to all areas of society and culture Today media are far more pervasive than in the 1950s and 1960s when he wrote Yet his work has still not received its due attention *Transforming McLuhan* will begin to correct this oversight Mark Poster University of California Irvine Author of *What s the Matter with the Internet and Information Please* *Transforming McLuhan* re reads the McLuhan phenomenon in light of today s media saturated 24 7 news and smartphone world Here we meet again with the visionary Tiresias in the Underworld whose dark sayings once lit the late afternoon of the twentieth century These critical readings create a time out to question him again and to open space time interstices for alternate thoughts and alternate actions Michael Heim Mount St Mary s College Los Angeles Author of *The Metaphysics of Virtual Reality* and *Virtual Realism* *Transforming McLuhan* offers a rich and textured

reconsideration of Marshall McLuhan's ideas demonstrating how McLuhan's work is a better match for current multi-dimensional and ambivalent understandings of media and culture than it was for the narrower conceptions that guided those who dismissed McLuhan in his own time. These provocative and well-written essays persuasively engage in what I have called morphing McLuhan with other key theoretical frameworks. As a result, *Transforming McLuhan* illustrates that cultural theorists have much to learn from McLuhanism but that McLuhan's perspective also has much room for enrichment from critical media studies.

Joshua Meyrowitz, University of New Hampshire, Author of *No Sense of Place: The Impact of Media on Social Behavior*. **BOOK JACKET** *Performing the Socialist State* Xiaomei Chen, 2023-02-07. *Performing the Socialist State* offers an innovative account of the origins, evolution, and legacies of key trends in twentieth-century Chinese theater. Instead of seeing the Republican, high socialist, and postsocialist periods as radically distinct, it identifies key continuities in theatrical practices and shared aspirations for the social role and artistic achievements of performance across eras. Xiaomei Chen focuses on the long and remarkable careers of three founders of modern Chinese theater and film: Tian Han, Hong Shen, and Ouyang Yuqian, and their legacy, which helped shape theater cultures into the twenty-first century. They introduced Western plays and theories, adapted traditional Chinese operas, and helped develop a tradition of leftist theater in the Republican period that paved the way for the construction of a socialist canon after 1949. Chen investigates how their visions for a free democratic China fared in the initial years after the founding of the People's Republic, briefly thriving only to founder as artists had to adapt to the Communist Party's demand to produce ideologically correct works. Bridging the faith play and antiparty plays of the 1950s, the red classics of the 1960s, and their reincarnations in the postsocialist period, she considers the transformations of the depictions of women, peasants, soldiers, scientists, and revolutionary history in plays, operas, and films, and examines how the market economy, collective memories, star culture, social networks, and state sponsorship affected dramatic productions. Countering the view that state interference stifles artistic imagination, Chen argues that theater professionals have skillfully navigated shifting ruling ideologies to create works that are politically acceptable yet aesthetically ingenious. Emphasizing the power dynamics and complexities of Chinese performance cultures, *Performing the Socialist State* has implications spanning global theater, comparative literature, political and social histories, and Chinese cultural studies.
