Processes Of Animal Memory:

Processes of Animal Memory (PLE: Memory) Douglas Medin, William Roberts, Roger Davis, 2014-05-09 Originally published in 1976 this volume contains new and original contributions of the time addressed to a related set of ideas concerning processes of memory in animals The theme is that animals remember and that theories of animal learning must take this into account as well as the coding processes that have been assumed to be specific to human beings The focus of the book is on processes and some progress is reported in differentiating types of memory The emphasis in applying animal work to studies of human memory is made not in terms of paradigms but in terms of processes implicated via performance in a variety of tasks Also many of the chapters reflect the usefulness of applying a memory framework to a variety of nonmemory paradigms This work will be essential reading for all those interested in animal as well as human memory and provided the most up to date and broadest examination of animal memory processes at the time from both a theoretical and conceptual framework

Information Processing in Animals N. E. Spear, R. R. Miller, 2014-02-24 First published in 1982 During the past fifty years dramatic changes have occurred in the use of laboratory animals to study learning and memory Yet the basic reasons for this research diverse as they are have not changed At one extreme is the need for relatively direct application of findings with animal models to medical or educational problems of humans at the other extreme the quest for understanding animal behavior for its own sake It is probably fair to say that no chapters in this book represent either of these extremes although in each case the author's purposes can be said to be like those of some scientists working in this area fifty years ago In contrast to this continuity of purpose the approach that scientists now take in this area of study is really quite different from that of most or all scientists in the 1930s

Theories of Animal Memory Donald F. Kendrick, Mark E. Rilling, M. Ray Denny, 2014-04-04 First published in 1986 This book is

concerned with the transition of animal learning from a strict stimulus response S R approach to a more cognitive approach In response to noted past research that was guided by some perspective or theoretical framework based partly on a combination of research results and individual opinions about what animals can do This volume was thus conceived as a collection of chapters in which animal memory researchers could publicly state their opinions about animal memory with little concern for substantiating them with test data This volume is organized in three main sections of three chapters each The first section The Grand Approach is a collection of chapters with a meta theoretical perspective The second section Memory Processes presents three chapters concerned with the processes properties and mechanisms of short term memory in animals The third section Theoretical Issues presents two highly developed theories of animal memory one based on pigeon short term memory experiments and one based on delayed alternation in the rat

Memory Mechanisms K. Geoffrey White, Wickliffe C. Abraham, Michael C. Corballis, 2014-02-25 Presenting the work of researchers who are at the forefront of the study of memory mechanisms this volume addresses a wide range of topics including physiological and biophysical studies of synaptic plasticity neural models of information storage and recall functional and structural considerations of amnesia in brain damaged patients and behavioral studies of animal cognition and memory The book's coverage of diverse approaches to memory mechanisms is intended to help dissolve the borders between behavioral psychology cognitive neuropsychology and neurophysiology

Learning and Memory Isidore Gormezano, Edward A. Wasserman, 2013-02-01 This volume presents the views and findings of behaviorally and biologically oriented investigators invited to participate in The University of Iowa's biennial learning and memory symposium While chapters vary in their scope and depth of coverage they are all amply referenced so that researchers teachers and students can obtain background information appropriate to their respective needs

The Processing of Memories (PLE: Memory) Norman E. Spear, 2014-05-09 Originally published in 1978 this volume contains the evidence that is most crucial for our understanding the processes of forgetting and retention Organized in terms of problem areas and issues that are particularly pertinent to understanding these processes the book deals with both animal and human studies The author begins by defining the topic and reviewing its historical development A theoretical orientation follows and then the author begins to address the major factors that determine what is and what is not remembered Although we cannot yet specify the principles from which we can predict when an episode once learned will be remembered well or forgotten entirely the author demonstrates that such principles are not that far away He considers the issues that must be resolved before such principles are established and in the course of doing so covers the major research on why we remember events and why they are forgotten

The Oxford Handbook of Comparative Cognition Thomas R. Zentall, Edward A. Wasserman, 2012-03-20 This comprehensive volume illustrates why an understanding of animal intelligence is essential in disclosing the nature of minds other than our own making it a fascinating volume for anyone curious about the state of modern comparative cognition

Honig,P. H. R. James,2013-10-22 Animal Memory is based on the proceedings of a symposium held at Dalhousie University in the summer of 1969 Each of the seven chapters provide broad coverage of the topic with which it is concerned and the experimental work reported is representative of the most significant developments in the field The book includes two studies on associative memory the memory of one event which is essential to its association over a delay with subsequent events One study shows that shows that animals can remember events from one learning trial to the next and that their behavior will be determined largely by the sequences of trials with differing outcomes the other presents research on the association of flavors with toxicosis in a conditioning paradigm Separate chapters deal with retentive memory the retention and forgetting of learned behavior over time and the physiological basis of memory in terms of consolidation theory These studies demonstrate that animals do forget and examine theories of forgetting The final chapter provides a critical discussion based on all of the foregoing material in which the topics covered in the book are related to current work on human retention and forgetting The Wiley Blackwell Handbook of Operant and Classical Conditioning Frances K. McSweeney,Eric S. Murphy,2014-05-23 This combined survey of operant and classical conditioning provides professional and academic readers with an up to date inclusive account of a core field of psychology research with in depth coverage of the basic theory its applications and current topics including behavioral economics Provides comprehensive coverage of operant and classical conditioning relevant fundamental theory and applications including the latest techniques Features chapters by leading researchers professionals and academicians Reviews a range of core literature on conditioning Covers cutting edge topics such as behavioral economics **Memory Consolidation** H.

Weingartner, E. S. Parker, 2014-03-18 First published in 1984 This volume was organized for students of human memory and related cognitive processes The issues deal not only with memory in unimpaired individuals but also with impaired patients and with consolidation in lower animals The chapters in this volume demonstrate that consolidation is a flourishing and controversial concept in memory research today More than ten years after the seminal book of McGaugh and Herz questions about consolidation are re examined in light of current models of human memory its pathology and its modulation by drugs

Handbook of Intelligence Sam Goldstein, Dana Princiotto, Jack A. Naglieri, 2014-12-08 Numerous functions cognitive skills and behaviors are associated with intelligence yet decades of research has yielded little consensus on its definition Emerging from often conflicting studies is the provocative idea that intelligence evolved as an adaptation humans needed to keep up with and survive in challenging new environments The Handbook of Intelligence addresses a broad range of issues relating to our cognitive and linguistic past It is the first full length volume to place intelligence in an evolutionary cultural framework tracing the development of the human mind exploring differences between humans and other primates and addressing human thinking and reasoning about its own intelligence and its uses The works of pioneering thinkers from Plato to Darwin Binet to Piaget Luria to Wechsler are referenced to illustrate major events in the evolution of theories of intelligence leading to the current era of multiple intelligences and special education programs In addition it examines evolutionary concepts in areas as diverse as creativity culture neurocognition emotional intelligence and assessment Featured topics include The evolution of the human brain from matter to mind Social competition and the evolution of fluid intelligence Multiple intelligences in the new age of thinking Intelligence as a malleable construct From traditional IQ to second generation intelligence tests The evolution of intelligence including implications for educational programming and policy The Handbook of Intelligence is an essential resource for researchers graduate students clinicians and professionals in developmental psychology assessment testing and evaluation language philosophy personality and social psychology sociology and developmental biology
