Thomas P. Carpenter,Elizabeth Fennema,Thomas A. Romberg,2012-10-12 Until recently there had been relatively little integration of programs of research on teaching learning curriculum and assessment However in the last few years it has become increasingly apparent that a more unified program of research is needed to acquire an understanding of teaching and learning in schools that will inform curriculum development and assessment The chapters in this volume represent a first step toward an integration of research paradigms in one clearly specified mathematical domain Integrating a number of different research perspectives is a complex task and ways must be found to reduce the complexity without sacrificing the integration The research discussed in this volume is tied together because it deals with a common content strand During the last ten years specific content domains have served as focal points for research on the development of mathematical concepts in children The areas of addition and subtraction algebra rational numbers and geometry are notable examples Whether a similar organizational structure will prevail for programs of research that integrate the study of teaching learning curriculum and assessment is an open question The perspectives presented in this volume illustrate the potential for adopting this perspective Algorithm Synthesis: A Comparative Study David M. Steier,A. Penny Anderson,2012-12-06 In early 1986 one

of us D M S was constructing an artificial intelligence system to design algorithms and the other A P A was getting started in program transformations research We shared an office and exchanged a few papers on the systematic development of algorithms from specifications Gradually we realized that we were trying to solve some of the same problems And so despite radical differences between ourselves in research approaches we set out together to see what we could learn from these

papers That s how this book started a couple of graduate students trying to cope with The Literature At first there was just a list of papers One of us D M S tried to cast the papers in a uniform framework by describing the problem spaces searched an approach used in artificial intelligence for understanding many tasks The generalized problem space descriptions though useful seemed to abstract too much so we decided to compare papers by different authors dealing with the same algorithm These comparisons proved crucial for then we began to see similar key design choices for each algorithm
