Advanced Fingerprint Recognition: From 3D Shape to Ridge Detail Feng Liu, Qijun Zhao, David Zhang, 2020-05-22

Fingerprints are among the most widely used biometric modalities and have been successfully applied in various scenarios. For example, in forensics, fingerprints serve as important legal evidence, and in civilian applications, fingerprints are used for access and attendance control as well as other identity services. Thanks to advances in three-dimensional 3D and high-resolution imaging technology, it is now feasible to capture 3D or high-resolution fingerprints to provide extra information and go beyond the traditional features such as global ridge patterns and local ridge singularities used in conventional fingerprint recognition tasks. This book presents the state of the art in the acquisition and analysis of 3D and high-resolution fingerprints. Based on the authors' research, this book focuses on advanced fingerprint recognition using 3D fingerprint features, i.e., finger shape level 0 features or high-resolution fingerprint features, i.e., ridge detail level 3 features. It is a valuable resource for researchers, professionals, and graduate students working in the field of computer vision, pattern recognition, security, biometrics practice, as well as interdisciplinary researchers. **Journal ...** Vermont. Advanced Materials and Nano Systems: Theory and Experiment - Part 2

Dibya Prakash Rai, 2022-09-30. The discovery of new materials and the manipulation of their exotic properties for device fabrication is crucial for advancing technology. Nanoscience and the creation of nanomaterials have taken materials science and electronics to new heights for the benefit of mankind. Advanced Materials and Nanosystems Theory and Experiment covers several topics of nanoscience research. The compiled chapters aim to update students, teachers, and scientists by highlighting modern developments in materials science theory and experiments. The significant role of new materials in future technology is also demonstrated. The book serves as a reference for curriculum development in technical institutions and research programs in the field of physics, chemistry, and applied areas of science like materials science, chemical engineering, and electronics. This part covers 12 topics in these areas: Recent advancements in nanotechnology, a human health perspective, an exploratory study on characteristics of SWIRL of AlGaAs/GaAs in advanced bio-based nanotechnological systems, electronic structure of the half-Heusler ScAuSn/LuAuSn and their superlattice, recent trends in nanosystems, improvement of performance of single and multicrystalline silicon solar cell using low-temperature surface passivation layer and antireflection coating, advanced materials and nanosystems, effect of nanostructure materials on optical properties of some rare earth ions doped in silica matrix, Nd₂Fe₁₄B and SmCO₅ a permanent magnet for magnetic data storage and data transfer technology, visible light-induced photocatalytic activity of MWCNTs decorated sulfide-based nano photocatalysts, organic solar cells, neodymium-doped lithium borosilicate glasses, comprehensive quantum mechanical study of structural features, reactivity, molecular properties, and wave function-based characteristics of capmatinib. *International Electronics Directory '90* C. European Manufacturers Agents and Applications Part 1 comprises a directory of various manufacturers in Europe and a directory of agents in Europe This book contains a classified directory of electronic products and services where both manufacturers and agents are listed This edition is organized into two sections Section 1 provides details of manufacturers including number of employees production program names of managers as well as links with other companies The entries are listed alphabetically on a country by country basis Section 2 provides information concerning agents or representatives including names of manufacturers represented names of managers number of employees and range of products handled A number of these companies are also active in manufacturing and so appear in both Section 1 and Section 2 This book is a valuable resource for private consumers

Numerical Mathematics and Advanced Applications - ENUMATH 2013 Assyr Abdulle, Simone Deparis, Daniel Kressner, Fabio Nobile, Marco Picasso, 2014-11-25 This book gathers a selection of invited and contributed lectures from the European Conference on Numerical Mathematics and Advanced Applications ENUMATH held in Lausanne Switzerland August 26 30 2013 It provides an overview of recent developments in numerical analysis computational mathematics and applications from leading experts in the field New results on finite element methods multiscale methods numerical linear algebra and discretization techniques for fluid mechanics and optics are presented As such the book offers a valuable resource for a wide range of readers looking for a state of the art overview of advanced techniques algorithms and results in numerical mathematics and scientific computing

Advanced Biometrics David Zhang, Guangming Lu, Lei Zhang, 2017-08-08 This book describes a range of new biometric technologies such as high resolution fingerprint finger knuckle print multi spectral backhand 3D fingerprint tongueprint 3D ear and multi spectral iris technologies Further it introduces readers to efficient feature extraction matching and fusion algorithms in addition to developing potential systems of its own These advanced biometric technologies and methods are divided as follows 1 High Resolution Fingerprint Recognition 2 Finger Knuckle Print Verification 3 Other Hand Based Biometrics and 4 New Head Based Biometrics Traditional biometric technologies such as fingerprint face iris and palmprint have been extensively studied and addressed in many research books However all of these technologies have their own advantages and disadvantages and there is no single type of biometric technology that can be used for all applications Many new biometric technologies have been developed in recent years especially in response to new applications The contributions gathered here focus on how to develop a new biometric technology based on the requirements of essential applications and how to design efficient algorithms that yield better performance
