How to Read a Paragraph Richard Paul, Linda Elder, 2019-06-01 How to Read a Paragraph introduces the importance of purposeful skilled reading and lays out methods by which to develop close reading skills using the tools of critical thinking. Developing these skills enables students to read for deep understanding to properly analyze and assess what they read and to reason within the logic of an author. As readers engage with the thinking of authors and uncover their assumptions and motivations they glean the most useful information from their written work. This book pairs with *How to Write a Paragraph* to offer an in depth introduction to effective reading and writing skills. Activities in the book help sharpen reading comprehension skills for an elevated level of self understanding fulfillment and depth of vision. As part of the Thinker's Guide Library this book advances the mission of the Foundation for Critical Thinking to promote fairminded critical societies through cultivating essential intellectual abilities and virtues within every field of study across world.

Reading for Evidence and Interpreting Visualizations in Mathematics and Science Education Stephen P. Norris, 2012-09-17 CRYSTAL Alberta was established to research ways to improve students understanding and reasoning in science and mathematics. To accomplish this goal faculty members in Education Science and Engineering as well as school teachers joined forces to produce a resource bank of innovative and tested instructional materials that are transforming teaching in the K 12 classroom. Many of the instructional materials cross traditional disciplinary boundaries and explore contemporary topics such as global climate change and the spread of the West Nile virus. Combined with an emphasis on the use of visualizations the instructional materials improve students engagement with science and mathematics. Participation in the CRYSTAL Alberta project has changed the way I think about the connection between what I do as a researcher and what I do as a teacher. I have learned how to better translate scientific knowledge into language and activities appropriate for students thereby transforming my own teaching. I also have learned to make better connections between what students are learning and what is happening in their lives and the world thereby increasing students interest in the subject and enriching their learning experience.

Language Awareness and Learning to Read J. Downing, R. Valtin, 2012-12-06 During the 1970s there was a rapid increase in interest in metacognition and metalinguistics The impetus came from linguistics psychology and psycholinguistics But with rather unusual rapidity the work from these scientific disciplines was taken over in education This new direction in these various areas of academic study was taken simultaneously by several different investigators Although they had varying emphases their work sometimes appears to be overlapping despite this it has been rather difficult to find a consensus This is reflected in the varying terminology used by these independent investigators linguistic awareness metacognition metalinguistic ability task awareness lexical awareness and so on For educators these developments presented a glittering array of new ideas that promised to throw light on children's thinking processes in learning how to read Many reading researchers and graduate students have perceived this as a new frontier for the development of theory and research However the variety of independent theoretical approaches and their accompanying terminologies has been somewhat confusing
