### Abstract

This study aims to investigate interpretive reading; as a strategy to construct meaning among English as a foreign language (EFL) beginner level students at the Faculty of Languages and Translation, King Khalid University(KKU). It will also suggest ways in which instructors can incorporate this strategy into their teaching. Reading appears to be one of the challenging skills for EFL Saudi students for various reasons; among them, the primary one can be that students are usually less motivated towards self-reading. The Interpretive reading strategy could go a long way to bridge the gaps in understanding comprehension passages, as it is a performance/rhetoric-related strategy and lies at a more intuitive level. Engaging and motivating students in learning requires a few essential factors, such as exciting tasks, the sociocultural background of the learners, and people who manage the delivery of the course (Marshall,1992). An experimental and control group of students will be selected, enrolled in the reading course, at level 1. The test group will get training in the interpretive reading techniques through their EFL instructors, having excellent in-depth knowledge of the skill of interpretive reading techniques. After teaching for more than eight weeks, a proficiency test will gauge student's performance. The obtained results are compared using SPSS software to see the significant achievements and suggestions, and necessary recommendations are made.

**Speaking, Reading, and Writing in Children With Language Learning Disabilities** Katharine G. Butler,Elaine R. Silliman,2001-12-01 The ability to use language in more literate ways has always been a central outcome of education Today however being literate requires more than functional literacy the recognition of printed words as meaningful It requires the

knowledge of how to use language as a tool for analyzing synthesizing and integrating what is heard or read in order to arrive at new interpretations Specialists in education cognitive psychology learning disabilities communication sciences and disorders and other fields have studied the language learning problems of school age children from their own perspectives All have tended to emphasize either the oral language component or phonemic awareness The major influence of phonemic awareness on learning to read and spell is well researched but it is not the only relevant focus for efforts in intervention and instruction An issue is that applications are usually the products of a single discipline or profession and few integrate an understanding of phonemic awareness with an understanding of the ways in which oral language comprehension and expression support reading writing and spelling Thus what we have learned about language remains disconnected from what we have learned about literacy interrelationships between language and literacy are not appreciated and educational services for students with language and learning disabilities are fragmented as a result This unique book a multidisciplinary collaboration bridges research practice and the development of new technologies It offers the first comprehensive and integrated overview of the multiple factors involved in language learning from late preschool through post high school that must be considered if problems are to be effectively addressed Practitioners researchers and students professionally concerned with these problems will find the book an invaluable resource

**Reading Skills Problem Solver** Wilma H. Miller, 2001-12-15 Publisher Description *Measuring Reading Competence* S. Schwartz, 2013-06-29 This book concerns measuring reading skills It is not meant to be a comprehensive survey of reading research or a review of all possible approaches to reading measurement although considerable attention is given to both subjects Instead the purpose of this book is to present a coherent theoretically based approach to measuring reading competence The ability to measure a phenomenon is an important prerequisite for scientific analysis As Lord Kelvin said One's knowledge of science begins when he can measure what he is speaking about and express it in numbers Unfortunately not just any numbers will do Presently available reading tests provide their users with a plethora of numbers age levels percentiles grade equivalents but their scientific value is questionable The problem is that there is more to scientific measurement than merely assigning numbers to arbitrarily chosen behaviors Scientific measurement occurs only within the confines of a theory and most reading tests are atheoretical Recent years have witnessed an explosive growth in reading research
