Contributions of Space Geodesy to Geodynamics David E. Smith, Donald L. Turcotte, 1993-01-11 Published by the American Geophysical Union as part of the Geodynamics Series Volume 24 There are times in the history of a science when the evolving technology has been combined with a singleness of purpose to make possible the next great step For space geodesy the decade of the 1980s was one of those times Initiated in the early 1980s the NASA Crustal Dynamics Project CDP a global venture of unprecedented proportions exploited new technologies to confirm and refine tectonic theories and to advance geodynamics The highlights of the efforts of scientists and engineers from some 30 countries are contained in the 54 papers collected in three volumes which are dedicated to the memory of Edward A Ted Flinn the former Chief Scientist of the NASA Geodynamics Program

Recent Evolution and Seismicity of the Mediterranean Region E. Boschi, E. Mantovani, A. Morelli, 2012-12-06 The Mediterranean is one of the most studied regions of the world In spite of this a considerable spread of opinions exists about the geodynamic evolution and the present tectonic setting of this zone The difficulty in recognizing the driving mechanisms of deformation is due to a large extent to the complex distribution in space and time of tectonic events to the high number of parameters involved in this problem and to the scarce possibility of carrying out quantitative estimates of the deformation implied by the various geodynamic hypotheses However we think that

a great deal of the present ambiguity could be removed if there were more frequent and open discussions among the scientists who are working on this problem The meeting of ERICE was organized to provide an opportunity in this sense In making this effort we were prompted by the conviction that each step towards the understanding of the Mediterranean evolution is of basic importance both for its scientific consequences and for the possible implications for society It is well known for instance that the knowledge of ongoing tectonic processes in a given region and of their connection with seismic activity may lead to the recognition of middle long term precursors of strong earthquakes The few cases of tentative earthquake prediction in the world occurred where information on large scale seismotectonic behavior was available This led to identify the zones prone to dangerous shocks where observations of short term earthquake precursors were then concentrated

The History of Geophysics in Southern Africa Johan H de Beer, 2016-01-25 Geophysics is a comparatively young science which only evolved as a distinct discipline during the 19th century However its phenomena like earthquakes tsunamis volcanic eruptions and lightning had been objects of fear curiosity and speculation since ancient times In this book Johan de Beer and his research team reveal that geophysical activity in South Africa can be traced back to as early as 1488 This is a truly astonishing revelation which deserves to be firmly entrenched as part of the country s proud history The book also discusses the history and formation of South African geophysical institutions that made a huge and seldom acknowledged contribution to the technological development of southern Africa
