Securing U S Defense Information Infrastructure A Proposed Approach:

Securing the U.S. Defense Information Infrastructure: A Proposed Approach, 1999 This report addresses the survivability and assured availability of essential U S information infrastructures especially when they are under various forms of information warfare attack To the best of our knowledge the term minimum essential information infrastructure MEII was coined by one of the authors Mesic as part of the planning for a series of Day After in Cyberspace information warfare exercises conducted from 1995 to the present under the direction of our RAND colleague Roger Molander The idea is that some information infrastructures are so essential that they should be given special attention perhaps in the form of special hardening redundancy rapid recovery or other protection or recovery mechanisms Players in the Day After exercises were intrigued by the MEII concept but asked Is this concept feasible Is it practical For what portions of the Department of Defense and U S infrastructure is the concept relevant What would such infrastructures look like How effective or useful would they be This report documents the findings of the first year of a study of the MEII concept attempting to formulate some initial answers to these questions or if these are not the right questions to ask and answer better ones This report should be of interest to persons responsible for assuring the reliability and availability of essential information systems throughout the U S defense establishment the U S critical infrastructure and other organizations Its findings and recommendations are relevant at all organizational levels from small units to major commands

Disruptive Security Technologies with Mobile Code and Peer-to-Peer Networks R.R. Brooks, 2004-11-29 The traditional fortress mentality of system security has proven ineffective to attacks by disruptive technologies This is due largely to their reactive nature Disruptive security technologies on the other hand are proactive in their approach to attacks They allow systems to adapt to incoming threats removing many of the vulnerabilities explo

[The Nature of War in the Information Age](#) David J. Lonsdale, 2004-06-01 There has been a great deal of speculation recently concerning the likely impact of the Information Age on warfare In this vein much of the Revolution in Military Affairs RMA literature subscribes to the idea that the Information Age will witness a transformation in the very nature of war In this book David Lonsdale puts that notion to the test Using a range of contexts the book sets out to look at whether the classical Clausewitzian theory of the nature of war will retain its validity in this new age The analysis covers the character of the future battlespace the function of command and the much hyped concept of Strategic Information Warfare Finally the book broadens its perspective to examine the nature of Information Power and its implications for geopolitics Through an assessment of both historical and contemporary case studies including the events following September 11 and the recent war in Iraq the author concludes that although the future will see many changes to the conduct of warfare the nature of war as given theoretical form by Clausewitz will remain essentially unchanged

Finding and Fixing Vulnerabilities in Information Systems Philip S. Anton, Robert H. Anderson, Richard Mesic, Michael Scheiern, 2004-02-09 Understanding an organization's reliance on information systems and how to mitigate the vulnerabilities of these systems can be an intimidating challenge especially when considering less well known weaknesses or even unknown vulnerabilities that have not yet been exploited The authors introduce the Vulnerability

Assessment and Mitigation methodology a six step process that uses a top down approach to protect against future threats and system failures while mitigating current and past threats and weaknesses Technology and the Law on the Use of Force Jackson Maogoto, 2014-11-13 As governmental and non governmental operations become progressively supported by vast automated systems and electronic data flows attacks of government information infrastructure operations and processes pose a serious threat to economic and military interests In 2007 Estonia suffered a month long cyber assault to its digital infrastructure described in cyberspace as Web War I In 2010 a worm Stuxnet was identified as supervisory control and data acquisition systems at Iran s uranium enrichment plant presumably in an attempt to set back Iran s nuclear programme The dependence upon telecommunications and information infrastructures puts at risk Critical National Infrastructure and is now at the core of national security interests This book takes a detailed look at these new theatres of war and considers their relation to international law on the use of force Except in cases of self defence or with the authorisation of a Security Council Resolution the use of force is prohibited under the UN charter and customary international law However the law of jus ad bellum was developed in a pre digital era where current technological capabilities could not be conceived Jackson Maogoto asks whether the law on the use of force is able to deal with legal disputes likely to arise from modern warfare Key queries include how one defines an armed attack in an age of anti satellite weaponry whether the destruction of a State s vital digital eco system or the blinding of military communication satellites constitutes a threat and how one delimits the threshold that would enliven the right of self defence or retaliatory action The book argues that while technology has leapt ahead the legal framework has failed to adapt rendering States unable to legally defend themselves effectively The book will be of great interest and use to researchers and students of international law the law of armed conflict Information Technology and the law and counter terrorism *Electronic Enterprise: Strategy and Architecture* Targowski, Andrew, 2003-01-31 Electronic enterprise is the road map to well planned evolution of enterprise complexity with business and system strategies integration through standardized architectures of IT components This work provides a vision for IT leaders with practical solutions for IT implementation
