Raymond, Neil E. Johnson, 2017-10-20 An understanding of rocks and the minerals that comprise them lies at the core of every geologist s education As more curricula combine mineralogy and petrology into a single course Raymond and Johnson have responded with a concise introduction to the study of Earth materials The authors have written at a level that won t intimidate students encountering fundamental concepts for the first time yet with enough rigor that they ll be well prepared for future study A broad approach to the subject that incorporates fluids and soils will appeal to instructors who teach engineering and environmental science students as well as future geoscientists Abundant illustrations reinforce all of the ideas in the text Many images are presented in color with additional color images available at waveland com Raymond Johnson Problems appear throughout the book encouraging a deeper understanding for students Helpful appendices make it easy for instructors to assign further exercises in rock and mineral identification as well as optical mineralogy and petrography *U.S. Geological Survey Bulletin* ,1983 **Rocks** Britannica Educational Publishing, 2011-05-01 Often concealing millennia worth of Earth s history rocks seem to project an impression of durability and permanence that belies their transformation over time Seen in all shapes and sizes and found in many of the planet s ecosystems rocks have been subject to various natural forces that have affected such attributes as their elasticity strength and ductility that is their ability to be fashioned into a new form The general properties as well as the three major

categories of rock igneous sedimentary and metamorphic are all examined in depth in this penetrating volume *Glossary of Geology* Klaus K. E. Neuendorf, American Geological Institute, 2005 The fifth edition of the Glossary of Geology contains nearly 40 000 entries including 3 600 new terms and nearly 13 000 entries with revised definitions from the previous edition In addition to definitions many entries include background information and aids to syllabication The Glossary draws its authority from the expertise of more than 100 geoscientists in many specialties who reviewed definitions and added new terms Uplift of the Bighorn Mountains, Wyoming and Montana C. E. Whipkey, Victor V. Cavaroc, Romeo M. Flores, 1991 Fluvial and lacustrine dominated clastic sedimentary rocks as thick as 1 800 m 6 000 ft comprise the Paleocene Fort Union Formation and the Eocene Wasatch Formation of the western Powder River Basin in northeastern Wyoming and southeastern Montana The systematic mineralogy of 45 samples of channel fill sandstone from this sequence reflects the uplift and erosion of the Bighorn Mountains Samples were collected to study vertical changes in the mineralogy of lower Tertiary sandstones adjacent to the Bighorn Mountains lateral variations in the composition of the upper Paleocene Tongue River Member of the Fort Union Formation along the eastern front of the mountains and variations in the composition of equivalent upper Paleocene sandstones of the central and western parts of the basin Vertical changes in the mineralogy of a succession of Paleocene and Eocene sandstone units adjacent to the Bighorn Mountains most likely were produced by uplift and sequential erosion of the rocks that formerly overlaid the mountains Uplift probably began in the middle Paleocene during deposition of the Lebo Member of the Fort Union Formation and continued into the Eocene Differences in the mineralogy of the sandstone units along the western edge of the Powder River Basin that correspond to differences in the rock types now exposed along the crest of the Bighorn Mountains suggest that much of the erosional degradation of the Bighorn Mountains occurred during an early Tertiary tectonic episode Lateral changes in the suite of unstable detrital grains within the Tongue River Member are compatible with facies and paleotransport studies that indicate a substantial eastward flux of detritus of early Tertiary age from the Bighorn Mountains into the central Powder River Basin
