Seedborne Diseases and Their Control R. B. Maude, 1996 Seed pathology Infection of seeds Longevity of seedborne organisms Seed transmission of disease Spread and survival of seedborne pathogens Disease control Eclusion and reduction of inoculum Disease control eradication and reduction of inoculum by seed treatment Disease control by cultural measures and sanitation practices Detection of seedborne organisms *Postharvest Pathogens and Disease Management* P. Narayanasamy, 2005-11-14 POSTHARVEST PATHOGENS AND DISEASE MANAGEMENT Postharvest diseases caused by microbial pathogens account for millions of dollars in losses of both durable and perishable produce products every year Moreover with consumers increasingly demanding minimally processed vegetables and fruits which can be invaded by human pathogens there is an imperative need for suitable protective measures to provide pathogen free commodities that are free from or contain only acceptable levels of chemical residues Providing details of both conventional and modern molecular techniques applicable for the detection identification and differentiation of field and storage microbial pathogens Postharvest Pathogens and Disease Management Discusses diseases of both durables and perishables during transit and storage Provides a basic understanding of the effects of handling and storage practices as well as field conditions and product susceptibility on the development of postharvest diseases Reveals as a cautionary note the potential hazards of mycotoxins with carcinogenic properties that can contaminate fruits and vegetables Contains detailed information derived from elucidative evidence and disease data in order to explain the infection process and subsequent stages of disease development Helps readers to avoid conditions that favor disease incidence and spread Includes real life examples of disease management strategies to help readers develop effective disease management systems suitable for different ecosystems Emphasizes the importance of integrating several different effective methods in tandem including the development of cultivars with resistance to postharvest diseases the selection of suitable analytical methods and the effective use of biocontrol agents and chemicals Presents protocols for numerous techniques and basic methods making the book a distinctive and highly useful teaching and research tool Postharvest Pathogens and Disease Management offers readers insight into the principles and methods of avoiding and managing postharvest diseases of fruit and vegetable products in an efficient economical and environmentally feasible manner allowing producers to sell safer higher quality produce to the public and prevent the losses associated with postharvest disease

basic and critical input in agriculture to ensure global food security Roughly 90 percent of the crops grown all over the world are propagated by seed However seed can also harbour and spread pathogens e g fungi bacteria nematodes viruses etc which cause devastating diseases Seed borne pathogens represent a major threat to crop establishment and yield Hence timely detection and diagnosis is a prerequisite for their effective management The book Seed Borne Diseases of Agricultural Crops Detection Diagnosis Management addresses key issues related to seed borne transmitted diseases in various agricultural crops Divided into 30 chapters it offers a comprehensive compilation of papers concerning the history of seed pathology importance of seed borne diseases seed borne diseases and quarantine seed health testing and certification detection and diagnosis of seed borne diseases and their phytopathogens host parasite interactions during development of seed borne diseases diversity of seed borne pathogens seed borne diseases in major agricultural crops non parasitic seed disorders mechanisms of seed transmission and seed infection storage fungi and mycotoxins impact of seed borne diseases on human and animal health and management options for seed borne diseases We wish to thank all of the eminent researchers who contributed valuable chapters to our book which will be immensely useful for students researchers academics and all those involved in various agro industries

Seed Quality Enhancement: Principles and Practices K. Vanangamudi, G. Sastry, S. Kalaivani, A. Selvakumari, M. Vanangamudi, P. Srimathi, 2010-03-01 Seed is the source of future plants or foods is the storage place of culture of history is the first link in the food chain is the ultimate symbol of food security Seed is the source of life Seeds are basic in crop production No agricultural practice can improve a crop beyond the limits set by the seed Quality seed is the key for successful agriculture which demands each and every seed should be readily germinable and produce a vigorous seedling ensuring high yield Care with the seed and joy with the harvest and Good seed doesn't cost it always pays are the popular adage which enlightens the importance of the quality seed The farmers always very much interested in the best seed management practices which are safe environmentally sound and scientifically proven technologies Understandably in view of the importance of quality seeds in Agriculture both as a product and as a means of establishing a crop most attention at all levels of investigation has been directed to crop seeds Since seed is a biological entity deterioration beyond harvest is inevitable The consequences of low quality seeds are poor germination low and delayed emergence and weak growth leading to poor field stand and ultimately reflecting on reduced yield Low productivity could be attributed broadly to use of poor quality seeds At present to overcome this several seed enhancement techniques are available for quality upgradation It has two goals one is related to seed designing and other to seed functioning The rationale for pre sowing seed enhancement techniques is to mobilize the seeds own resources and to augment them with external resources to get maximum improvement in field stand establishment and yield To achieve this several physical physiological and biochemical treatments are available at present to give value addition to seeds Physiological seed treatments that improve seed performance are based primarily on seed hydration and dehydration Among several non physiological seed

treatments coating or pelleting can also indirectly improve seed germination stand establishment and crop productivity

Testing Methods for Seed-transmitted Viruses Sven Erik Albrechtsen, 2006 This book provides a practical guide to the commonly used detection methods for seed transmitted viruses and viroids affecting both tropical and non tropical crops The first part describes important aspects of seed transmitted viral diseases The second and main part contains principles of the detection techniques and step by step protocols accompanied by method optimization and comments Most of the described techniques can be equally applied to plant viruses and viroids other than seedborne ones This book will be of significant interest to those working in seed testing laboratories and students and teachers within plant pathology and seed science

Vegetable Diseases Steven T. Koike, Peter Gladders, Albert Paulus, 2006-12-14 Our dependence on healthy vegetable crops as a reliable source of food transcends all barriers of nation and culture Consumers now demand excellent quality from the industry that produces large volumes of high quality vegetables to be sold locally regionally and shipped internationally The diseases that affect vegetables compromise such quality
