Farmers, Scientists, and Plant Breeding David Arthur Cleveland,Daniela Soleri,2002-01-01 The purpose of this book is to examine the nature of and relationship between the knowledge of farmers and of scientists and how these can be best integrated in plant breeding *Globalization and New Geographies of Conservation* Karl S. Zimmerer,2006-09-15 Examining the geographical dimensions of environmental management and conservation activities implemented on landscapes worldwide *Globalization and New Geographies of Conservation* creates a new framework and collects original case studies to explore recent developments in the interaction of humans and their environment *Globalization and New Geographies of Conservation* makes four important arguments about the recent coupling of conservation and globalization that is reshaping the place of nature in human environmental change First it has led to an unprecedented number of spatial arrangements whose environmental management goals and prescribed activities vary along a spectrum from strict biodiversity protection to sustainable utilization involving agriculture food production and extractive activities Conservation and globalization are also leading by necessity to new scales of management in these activities that rely on environmental science thus shifting the spatial patterning of humans and the environment This interaction results as well in the unprecedented importance of boundaries and borders transnational border issues pose both opportunities and threats to global conservation proposed by organizations and institutions that are themselves international Lastly *Globalization and New Geographies of Conservation* argues that the local level has been integral to globalization while the regional level is often eclipsed at the peril of the successful implementation of conservation and management programs Bridging the gap between geography and life science *Globalization and New Geographies of Conservation* will appeal to a broad range of students of the environment conservation planning biodiversity management and development and globalization studies

Farmers and Plant Breeding Ola Tveitereid Westengen,Tone Winge,2019-10-02 This book presents the history of and current approaches to farmer breeder collaboration in plant breeding situating this work in the context of sustainable food systems as well as national and international policy and law regimes Plant breeding is essential to food production climate change adaptation and sustainable development This book brings together experienced practitioners and researchers involved in collaborative breeding programmes across a diversity of crops and agro ecologies around the world Case studies include collaborative sorghum and pearl millet breeding for water stressed environments in West Africa participatory rice breeding for intensive rice farming in the Mekong Delta and evolutionary participatory quinoa breeding for organic agriculture in North America While outlining the challenges the volume also highlights the positive impacts such as yield increases farmers empowerment in the innovation and development processes contributions to maintenance of crop genetic
