Selected Constants Relative To Semi Cond:

Selected Constants Relative to Semi-Conductors P Aigrain, Minko Balkanski, 2013-10-02 Selected Constants Relative to Semi Conductors presents the physical constants of semiconductors in Table form The values of the electronic properties of semiconductors presented in the Table are parameters intended for use in theoretical and phenomenological equations relative to the band theory for these materials In addition to data specific to band structure the Table also includes mobilities of electrons and holes and their variation with temperature Data of a general physical character are also presented since the researcher very often finds use for values of this type The following quantities are given when available symmetry group and crystal parameters refractive index dielectric constant effective ionic charge work function photoemission work function piezoresistance coefficient elastic coefficients phonon temperature Debye temperature magnetic susceptibility coefficient of linear expansion fusion temperature sublimation temperature specific heat at constant pressure latent heat of fusion latent heat of sublimation thermal conductivity disorder factor and density Semiconductors T. Fistul, 2012-12-06 Recently there has been a considerable upsurge of interest in heavily doped semiconductors This interest is due primarily to the expanding range of applications of such materials Moreover the heavy doping of semiconductors produces new effects the forma tion of

impurity aggregates the appearance of allowed states in the forbidden band etc J which are of great interest in solid state physics The rapid growth in the number of papers on heavily doped semiconductors makes it difficult to review the results obtained so far Therefore many investigations carried out in 1966 7 particularly those on IIIIV semiconductors are not discussed in the present monograph which represents the state of the knowledge in 1965 Nevertheless the author hopes that in spite of this the book will be useful An attempt is made first to review investigations of heavily doped semiconductors from a certain viewpoint and secondly to suggest some ideas Chap 5 which may be controversial but which are intended to stimulate further studies of heavily doped semiconductors which can be regarded as a special case of disordered systems The work of American scientists investigating heavily doped semiconductors in particular the efforts of E O Kane J I Pankove R N Hall R A Logan W G Spitzer F A Trumbore and many others is well known to Soviet investigators It gives me pleasure to learn that Western readers will now have an opportunity to become acquainted with the work done in the USSR

Journal of the Institution of Electrical Engineers, 1928 *Selected Semiconductor Research* Ming-Fu Li, 2011 This book on solid state physics has been written with an emphasis on recent developments in quantum many body physics approaches It starts by covering the classical theory of solids and electrons and describes how this classical model has failed The authors then present the quantum mechanical model of electrons in a lattice and they also discuss the theory of conductivity Extensive reviews on the topic are provided in a compact manner so that any non specialist can follow from the beginning The authors cover the system of magnetism in a similar way and various problems in magnetic materials are discussed The book also discusses the Ising chain the Heisenberg model the Kondo effect and superconductivity amongst other relevant topics In the final chapter the authors present some works related to contemporary research topics such as quantum entanglement in many body systems and quantum simulations They also include a short review of some of the possible applications of solid state quantum information in biological systems *Transactions of the Faraday Society*
