Methods Of Evaluating Educational Technology:

Methods of Evaluating Educational Technology Walt Heinecke, Laura Blasi, 2001-09-01 This volume gathers some of the methods being developed by evaluators from university settings and the private sector While providing models and methods these authors also raise larger questions such as How can schools meet the challenge of educating all children without being limited by the educational legacy of a one size fits all curriculum and normative testing More than documenting an apprenticeship to gadgetry evaluators are seeking to measure meaningful learning and changes in teaching investigating approaches that are not possible or that are less accessible when students are in traditional classrooms without technology In this first volume of the series Research Methods for Educational Technology RMET the contributing authors draw upon examples of their work evaluating the implementation and development of educational technology as well as the impact of policies and programs in this field Within this volume several authors have written about the implementation and evaluation of technology across cultures and national boundaries pointing to an area of research that will rapidly expand in this decade The concern for meeting the needs of policymakers is also apparent in several of these chapters but there is tension between providing them with positive results to support their efforts and reexamining the questions they are asking and how these questions are developed We know that evaluation is not the extended arm of public relations and yet it becomes clear that evaluators are often asked to demonstrate a project is successful on the threat that the funding will be cut While this decision making process fits the timetable of the fiscal year it does not acknowledge that evaluation can be formative and strengthen programs This timetable also ignores the investment of time that is needed when implementing innovations like the Internet into teaching and learning Many of the authors included in this volume write from the context of evaluating federally funded programs and they provide valuable insight for future projects which are created and evaluated at the state level As technology initiatives are developed and funded outside of the federal arena more evaluators will be called upon From approaches developed from federally funded projects we can build upon these methods and models for evaluation within regional projects to answer questions related to budgets and accountability As we answer these immediate questions we can move forward to examine the long term impact of technology and the possibility that exercises in conformity will replace the adventure of human enlightenment for our children

Using Technology Evaluation to Enhance Student Learning Barbara Means, Geneva D. Haertel, 2004 Given the level of spending and hours devoted to technology based activities in today s schools educators and policymakers need to know which technologies have real long term payoffs for improving student learning This volume interprets the research perspectives published in Evaluating Educational Technology Effective Research Designs for Improving Learning to provide valuable insights for the successful use of technology in different classroom and curricular settings This groundbreaking resource used alone or with its companion research volume will give you the tools you need to make research based decisions concerning the use of

educational technology **Evaluating Educational Technology** Geneva D. Haertel, Barbara Means, 2003-09-26 Features chapters by today's leading authorities who outline research designs, methodologies, and types of assessments that can be used to more effectively evaluate educational technologies **Empirical Methods for Evaluating Educational Interventions** Gary D. Phye, Daniel H. Robinson, Joel Levin, 2005-04-22 New US government requirements state that federally funded grants and school programs must prove that they are based on scientifically proved improvements in teaching and learning. All new grants must show they are based on scientifically sound research to be funded, and budgets to schools must likewise show that they are based on scientifically sound research. However, the movement in education over the past several years has been toward qualitative rather than quantitative measures. The new legislation comes at a time when researchers are ill-trained to measure results or even to frame questions in an empirical way, and when school administrators and teachers are no longer remembered or were never trained to prove statistically that their programs are effective. *Experimental Methods for Evaluating Educational Interventions* is a tutorial on what it means to frame a question in an empirical manner, how one needs to test that a method works, what statistics one uses to measure effectiveness, and how to document these findings in a way so as to be compliant with new empirically based requirements. The book is simplistic enough to be accessible to those teaching and administrative educational professionals long out of schooling, but comprehensive and sophisticated enough to be of use to researchers who know experimental design and statistics but don't know how to use what they know to write acceptable grant proposals or to get governmental funding for their programs. Provides an overview to interpreting empirical data in education. Reviews data analysis techniques, use, and interpretation. Discusses research on learning, instruction, and curriculum. Explores importance of showing progress as well as cause and effect. Identifies obstacles to applying research into practice. Examines policy development for states, nations, and countries **Evaluating Technology in Teacher Education** Walt Heinecke, Pete Adamy, 2010-06-01 Overall, we come away from this project with a renewed sense of the complexity of evaluating the implementation and impact of technology in teacher education. In the post PT3 period, the federal government turned to large-scale experimental and quasi-experimental evaluations of educational technology, but these have produced little in the way of understanding what types of technology work in various content areas under various conditions. PT3 and its approach to evaluation can be viewed as the pioneering period of educational technology evaluation in teacher education. It was a time when evaluators were just beginning to develop appropriate standards that could be used as evaluation criteria. It was a time when the accumulated wisdom of the evaluation field with regards to the primacy of mixed methods and multiple indicators of outcomes was just beginning to take hold. PT3 evaluators understood the importance of treading the line between summative and formative evaluation and the relationship of evaluation to the improvement of educational practice. In a world where the policymakers now clamor for simple quantitative evaluations linking teacher preparation to pupil achievement scores, we are reminded that the causal chain from teacher preparation to in-service

performance and student achievement is fraught with externalities complexities and a less than equal playing field Collectively we still have not figured out how technology may be adding value to education beyond any potential impact on superficial standardized test scores We have as a nation ignored the call of cognitive psychologists who in 2000 called for a new frame of reference for learner centered community centered assessment centered and content centered educational processes They understood that the high stakes accountability systems hinder educational innovation and the release of technology s potential to unlock new ways of knowing and learning Looking back now on the accomplishments of the PT3 program within our current political context we see a need for more nuanced evaluation models that examine the relationship between pedagogy and technology integration with a realization that teacher preparation programs will vary in their approaches to both Some will focus on skills based approaches others on the relationship between pedagogical content knowledge and technology integration The PT3 program served as an important incubator and test bed of appropriate evaluation practice we are already looking back at the program for lessons on how to move forward We hope this volume may serve as a reminder of lessons for the future [International Encyclopedia of Education](#) ,2009-04-17 The field of education has experienced extraordinary technological societal and institutional change in recent years making it one of the most fascinating yet complex fields of study in social science Unequaled in its combination of authoritative scholarship and comprehensive coverage International Encyclopedia of Education Third Edition succeeds two highly successful previous editions 1985 1994 in aiming to encapsulate research in this vibrant field for the twenty first century reader Under development for five years this work encompasses over 1 000 articles across 24 individual areas of coverage and is expected to become the dominant resource in the field Education is a multidisciplinary and international field drawing on a wide range of social sciences and humanities disciplines and this new edition comprehensively matches this diversity The diverse background and multidisciplinary subject coverage of the Editorial Board ensure a balanced and objective academic framework with 1 500 contributors representing over 100 countries capturing a complete portrait of this evolving field A totally new work revamped with a wholly new editorial board structure and brand new list of meta sections and articles Developed by an international panel of editors and authors drawn from senior academia Web enhanced with supplementary multimedia audio and video files hotlinked to relevant references and sources for further study Incorporates ca 1 350 articles with timely coverage of such topics as technology and learning demography and social change globalization and adult learning to name a few Offers two content delivery options print and online the latter of which provides anytime anywhere access for multiple users and superior search functionality via ScienceDirect as well as multimedia content including audio and video files *The SAGE Handbook of Curriculum and Instruction* JoAnn Phillion,2008 The SAGE Handbook of Curriculum and Instruction is the first book in 15 years to comprehensively cover the field of curriculum and instruction Editors F Michael Connelly Ming Fang He and JoAnn Phillion along with contributors from around the world synthesize the
