Non-Radioactive Labelling A. J. Garman, 1997-03-20 Biological Techniques is a series of volumes aimed at introducing to a wide audience the latest advances in methodology The pitfalls and problems of new techniques are given due consideration as are those small but vital details not always explicit in the methods sections of journal papers In recent years most biological laboratories have been invaded by computers and a wealth of new DNA technology and this will be reflected in many of the titles appearing in the series The books will be of value to advanced researchers and graduate students seeking to learn and apply new techniques and will be useful to teachers of advanced undergraduate courses involving practical or project work Labelled biomolecules are an essential tool in life science research and non radioactive labels are becoming increasingly important due to their convenience of measurement greater safety and lack of disposal problems compared to radioactive labels This book provides practical information background theory and protocols to allow a beginner to label many types of biomolecules including proteins peptides nucleic acids and small molecules This book is essential for biochemists molecular biologists and cell biologists wanting to use non radioactively labelled molecules Aimed at researchers without specific expertise in chemistry the book includes A review of the main signal systems and labels available indicating their strengths and weaknesses Discussion of the most useful strategies for labelling the various biomolecules 32 protocols covering common labelling needs Descriptions of the factors governing protocol design enabling protocols to be modified for different applications Sources of information including references data and suppliers

Methods in Pain Research

Lawrence Kruger, 2001-06-22 In the past two decades pain research has become one of the most rapidly growing areas of neuroscience activity Methods in Pain Research brings together in a single volume a survey of the methods that can be used to study a reaction or sensory report in humans that can only be inferred by indirect means in animal or tissues studies It presents

Nonisotopic DNA Probe Techniques Larry J. Kricka, 2012-12-02 Recently many nonisotopic methods of probing specific DNA sequences have been developed as replacements for radioactive labels such as ³²P and ¹²⁵I This book brings all of these new methods together in one convenient easily accessible source It enables researchers to select the nonisotopic method best suited to their application and to use it to maximum advantage by following the straightforward instructions provided This book contains chapters on colorimetric bioluminescent chemiluminescent fluorescent and time resolved fluorescent detection methods Each chapter has been written by the inventor or developer of a particular nonisotopic method and thus provides an expert account of the method Each

chapter presents useful background information and detailed step by step easy to follow experimental procedures for labeling and detection Gives extensive practical information Covers major types of nonisotopic labels and procedures Presents background information for each method Provides strategies and detailed experimental procedures for labeling and detecting DNA sequences by Fluorescence Chemiluminescence Bioluminescence Colorimetry

Technologies for Detection of DNA Damage and Mutations G.P. Pfeifer, 2013-11-11 Man made carcinogens natural genotoxic agents in the environment as well as ionizing and ultraviolet radiation can damage DNA and are a constant threat to genome integrity Throughout the evolution of life complex DNA repair systems have developed in all living organisms to cope with this damage Unrepaired DNA lesions can promote genetic alterations mutations that may be linked to an altered phenotype and if growth controlling genes are involved these mutations can lead to cell transformation and the development of malignant tumors Proto oncogenes and tumor suppressor genes may be critical targets for DNA damaging agents In a number of animal model systems correlations between exposure to a carcinogen tumor development and genetic changes in tumor DNA have been established To understand mutagenesis processes in more detail at the molecular level we need to know the type and frequency of DNA adducts within cells their distribution along genes and specific DNA sequences as well as the rates at which they are repaired We also need to know what types of mutations are produced and which gene positions are most prone to mutagenesis This book provides a

collection of techniques that are useful in mutagenesis research The book is divided into three parts In Part I methods for DNA damage and repair analysis are provided
