Programming Languages and Systems Daniel Le Metayer, 2003-08-01 ETAPS 2002 was the fifth instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprised 5 conferences: FOSSACS, FASE, ESOP, CC, TACAS, 13 satellite workshops, ACL2, AGT, CMCS, COCV, DCC, INT, LDTA, SC, SFEDL, SLAP, SPIN, TPTS, and VISS. 8 invited lectures, not including those specific to the satellite events and several tutorials. The events that comprise ETAPS address various aspects of the system development process, including specification, design, implementation, analysis, and improvement. The languages, methodologies, and tools which support these activities are all well within its scope. Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.

Healthy diet metrics: a suitability assessment of indicators for global and national monitoring purposes Edward FRONGILLO, Jennifer COATES, Eric O VERGER, Mathilde SAVY, Yves MARTIN-PRÉVEL, Lynnette NEUFELD, Bridget HOLMES, Chika HAYASHI, Chris VOGLIANO, Kuntal SAHA, Elaine BORGHI, Francesco BRANCA, 2023-07-20 This report scientifically assesses the validity, usefulness, and fitness for purpose of existing healthy diet metrics for population assessment for global and national monitoring. Existing healthy diet metrics were identified and critically assessed through a set of criteria for their use as global and national monitoring indicators. After comparative evaluation, three healthy diet metrics were identified as the most suitable for global and national monitoring. The report highlights strengths and weaknesses for the existing healthy diet indicators. Some may be suitable for simple data collection tools and short data collection time, while other indicators may require complex quantitative dietary information, lengthy data collection time, and might need to confirm the validity in various contexts. Some of them may only capture a limited number of the sub-constructs of the construct of healthy diets. The report underlines the main knowledge gap regarding the population groups for which the metrics could be used, whether these indicators were developed for a particular demographic and/or socioeconomic groups and their ability to be used for other population groups. The report also identifies key priority areas to further explore how these indicators could be used for more population groups and settings.
